

Material Schedule...

It is important that the integrity of a Classic Barn presentation is in no way compromised. Therefore the following schedule sets out the materials and finishes that are used in a typical Classic Barn building.

more information below ▼

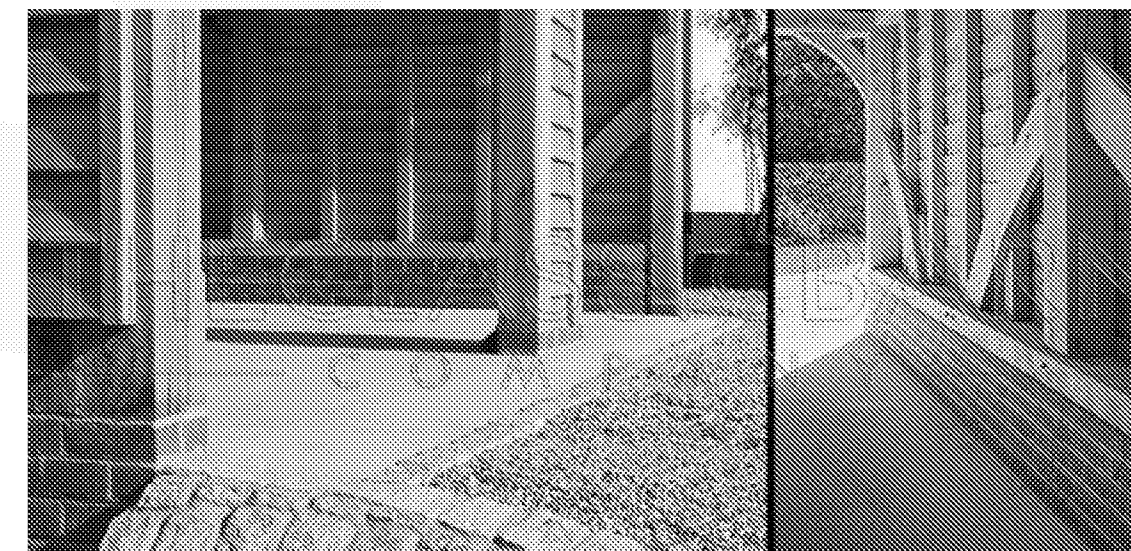

Oak Frame

The main frame is made from a generous cross section of natural oak, which is cut thick and chunky with aesthetics in mind. This continues into the roof space by utilising closely spaced, large, treated, softwood rafters.

Cladding

The exterior is finished with a high performance cladding such as Douglas Fir or Red Western Cedar. The cladding along with the oak frame, will silver in time. Finishing the walls with cladding of this calibre will outlast other softwoods or even oak, which can sometimes split when used for cladding. For even greater longevity, our cladding is cut to a generous cross section of 25mm tapering to 12mm, with a width of 200mm.

Brickwork and Foundation

Typically we use three courses of brickwork mounted on a neatly finished concrete foundation. Foundations are constructed to building regulations standards; we want the foundations to be constructed to the same standards as our barns.

Guttering

The material we use for guttering ranges from hardwearing black plastic to cast iron or aluminium. In all cases the installation is considered to ensure a practical yet unobtrusive presence against the Classic Barn structure.

Roof Covering

Select clay tiling, slate or timber shingles are carefully chosen to maintain the character across the roofs coverings. Tiles and shingles are picked from machine made, handmade or reclaimed options; some will have a camber to ensure a traditional finish across the roof line.

Joinery

We install handmade hardwood joinery made from selected stable hardwoods - such as iroko. The doors are framed, ledge and braced with substantial wrought iron fittings and given two coats of treatment for greater protection.

THECLASSICBARN C O M P A N Y

As proud members of The Guild of Master Craftsmen you can be assured we will deliver a high quality build that represents betterment in its new environment
