

Image 1.0 Google Map

Being a Commercial Car Dealership & office site with existing hardstanding, which is required for display vehicles and parking, by default there is a limited on-site natural environment which can be seen in Image 1.0. The existing planting to the perimeter of the site is a considerable distance away from the proposed small extension area and will be retained. Herras fencing will be used to protect this existing planting during the construction phase.

Image 2.0 shows the existing block paving to the front of the office building which is the only site change to accommodate the small extension. No other site alterations are currently planned in this proposal.

In the event there should be any mandatory biodiversity improvements, we request these to be included as part of the conditions of the application approval process.
