Dear Mrs Frecknall

Tree Report on your Mature Ash tree and the Environment Agency's
Mature Weeping Willow next to the Rife.

I refer to your Ash tree as T1. This tree situated in your rear garden, is in good health and shows no signs of die back. I recommend the major dead wood is removed from its inner canopy and 2 x lateral limbs reduced back by 2 metres. These limbs grow out over the neighbours on the north side of the tree.

Mature weeping Willow (T2) next to the rife. This tree is in good health. We carried out a reduction on this trees easterly spread some three to four years ago. For now, I recommend minimal crown lifting over the rife. This will involve removal of approximately 3metres pendulous low growth.

Due to the above two trees being accessible from your garden, I will put an application in with your address as the site. I you need to contact me, please do.

I hope the above works are acceptable.

Your

John
