

12/07/2019

Dear Mark

Please find the proofs over the next few pages detailing the design, sizing and positioning of the signs under discussion at Ferring Village Hall.

To give you some more info about the make up of the signs we are proposing:

Each and every panel will be made from powder coated 3mm depth true aluminium. This material will last for decades in all weather conditions and does not require any form of frame work - thus keeping the lines clean and also therefore nothing to deteriorate. This material is a far superior product to the aluminium composite material, (ACM or Dibond), which is commonly used in these sort of applications. However, although this ACM will look very similar to start with, it will have a much shorter lifespan of an average of 3-5 years in the seaside climate/environment.

We also feel that introducing an arched top to the 'name' signs is a particularly nice feature giving a friendly and traditional feel and again will greatly benefit from being made out of true aluminium.

There may well need to be changes to the wording on some of the signage, particularly the car park restrictions sign, but this will not affect any costings given.

The quotes shown also include the removal and disposal of all of the existing signage.

To finish with a little background history of Petersigns.

We have been established in Worthing since 1946 and the current team of 6 have over 75 years of experience between them. We are the trusted signmaking and graphics company for many large local institutions such as South Downs leisure who run all of the local sports facilities such as Splashpoint and Worthing Leisure Centre. Adur and Worthing Borough Council departments such as Worthing Theatres, Parks and Foreshores and Worthing Town Hall. We also make signs for most of the local schools in all of the Worthing area. Other clients include large local companies such as Paine Manwaring, Gardner and Scardifield and many other independent firms.

Should you wish us to proceed with your order you will find that the work will be manufactured and installed in a 10-14 working day turnaround period, after receipt of an initial 50% deposit.

We very much look forward to your decision.

Kindest regards

Alan Darling
Petersigns Director

Powder coated 3mm thick solid aluminium shaped signpanel sized at 395mm x 650mm
 bottom section of these 3 door signs will be a white board marking material
 £120+vat installed

ESTIMATE 1184 (3)

19/28

Powder coated 3mm thick solid aluminium shaped signpanel sized at 395mm x 650mm
bottom section of these 3 door signs will be a white board marking material
£120+vat installed

Estimate 1184 (5)
