

3 Glen Gardens Ferring

The tree in question is a mature Blue Cedar the trees is a fantastic specimen and provides amenity value to the surrounding area.

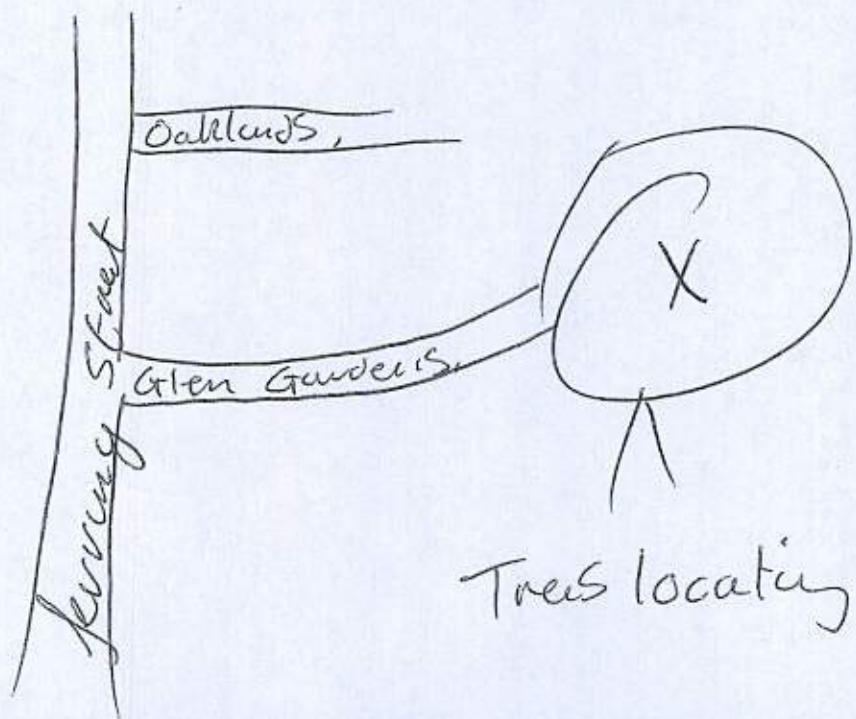

In recent years the lower canopy has grown to below 5 metres in height and the tree now has various long drawn out branches so of which have snapped recently.

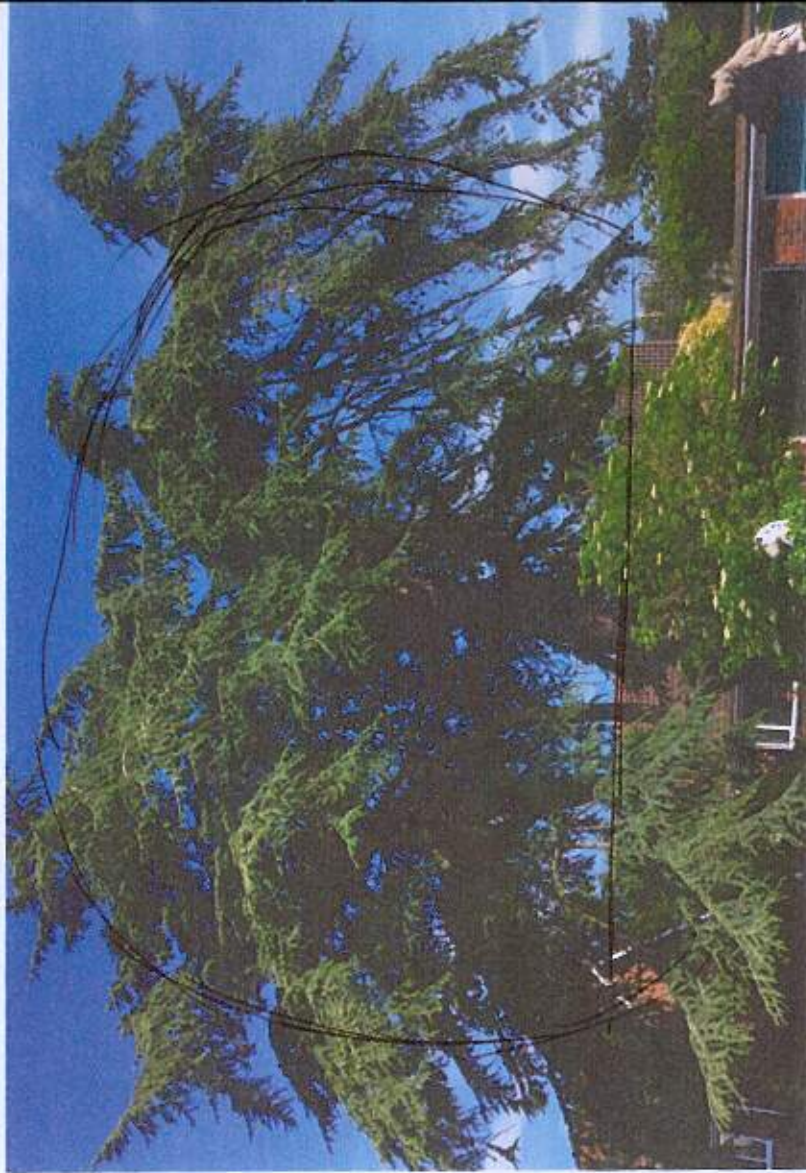

The proposed work would be reduce these long drawn out branches to the natural formed canopy which is around 4metres and then lift the lower canopy of the tree to a height of 5 metres.
