Arboricultural Implications

Reference: Stephen Babb- 1 Sea Lane Close

T1 Macrocarpa. This tree is situated in a prominent position within the village and approximately 6 metres from the neighbouring property and potentially has a higher visual value.

There are multiple minor wind damaged limbs, and one lower major limb (pictured below) with a crack caused by recent winds. Removing this would not affect the overall balance or value of the tree.

The canopy has a spread of approximately 14 metres. The work outlined aims to reduce the overall spread by 4 metres and radial spread by up to 2 metres overall. There is no need to reduce the height as reducing the spread of the upper canopy will provide adequate size reduction with minimal effect on its prominence.

Please see attached photos below for reference.

Yours sincerely

Daniel Barker
