

Flood Risk Assessment

ADC Ref: TBC

Property: Ferring Beach Car Park
The Strand, Ferring, BN12 5QP

Proposal: To resurface existing unmade car park ground with proprietary grid system. To improve access and safety by minimising potholes and flooded areas.

FRA: The application site is located within Ferring Beach car park which is within Flood Zone 3. The surrounding car park is unmade ground and is predominantly compacted shingle and earth. The new proposed grid system will reinforce the existing ground providing a more resilient surface; minimising potholes and flooded areas. The system will greatly improve surface water drainage and will not increase the potential of flood risk. All surface water run-off will continue to drain naturally. Please see additional submitted product literature and case studies for further information.
