**Sycamore trees T1 and T2 at 1 Regency Court, Ferring
Street, Ferring BN12 5BP**

These two trees are blocking light from the accommodation when in full leaf, as well as from the gardens.

In my view, to preserve the amenity value of the trees, an overall crown reduction back to previous pruning cuts is required.

In the interests of safety as well, the canopy would benefit from uplifting to 4 metres over the garden, and up to 5 metres over the highway.

For the health of the trees, to stop them being overrun by ivy, the ivy should be ring-cut at 2.5 metres above ground level, thus preserving wildlife habitat below this point.

Pruning out all dead wood will promote the general health of the trees.

Paul Bimson
