

Lighting Assessment

Wadars, Hangleton Lane, Ferring. BN12 6PP

The proposed lighting will not 'over' light the site.

Lighting around the buildings will be on a sensor system, so that lights will be switched off when the buildings are not in use or in-active.

Low level lighting is proposed for safety and security, with glare kept to a minimum by ensuring beam angles of light are directed downwards (max 70degree). Pathways will have floor level lighting and the building themselves will not be externally illuminated.

Due to the needs of the animals on site, all animal buildings will not be lit internally between the hours of 6pm and 8am, except in an animal welfare emergency.
