Hi Juan

I understand you have visited the Wadars site today and we would just like to clarify a couple of issues.

- **Please can we ask for the condition 8. re the one dog in isolation at any time to be removed from the report**
whilst it is unlikely that we would have to use the unit very often (the cattery iso block has never been used), if we had two or even three dogs sick at the same time, we need to be able to isolate them to prevent spread of infection. If they are sick it would mean that they are likely to be very quiet and would not have access to their outdoor exercise run, but we still need to keep that run in case a dog does need to go outside for a short time.
Dogs from other blocks would not have access to the iso exercise run
- **See details of where we plan to have fencing to separate each kennel block**
Each run is to be fenced in or each kennel block will be fenced in. Each run is fenced and each section is also self-contained as apart from anything else, if a dog in Intake escapes from the staff member, it cannot be allowed to get anywhere near Homing or Isolation and can only run within a contained area until caught again. On the attached sketch is indicated where each type of fencing (ie either wooden to prevent line of sight, or green metal fence/gates). Also attached are pictures taken at Battersea of that type of fencing.

I hope this is of assistance.

Kind regards
