Dear Karen

Report on the Over Mature Weeping Willow which can be accessed by the garden of 48 Langbury Lane. This tree is situated on the southwest bank of Ferring Rife

Thank you for requesting a visit to review the health of this tree (Salix x chrysocoma)

The tree is structurally poor and supports major sections of dead wood including a whole dead limb making up the north eastern section of the tree's canopy. There is also extensive heart wood decay throughout the trees main structure. The tree has recently shed some large limbs which have been cleared by the owner of No. 48

I unfortunately feel that this tree is a safety liability and on grounds of safety recommend the tree is felled.

Pre the felling of this tree, a climbing inspection will need to be carried out to check for nesting birds.

Please don't hesitate to get in touch if you have any questions.

Yours sincerely
