Steve,

A reduction in size will improve the application's chances of a positive recommendation. It will need to be determined by committee if recommended for approval and I have not discussed the application with other officers who will need to sign off the recommendation in order to get it onto the next agenda

Steve,
Is it not possible to reduce the width by 1 metre and not increase the length?

Anita

we have looked at the latest siting from the road and we don't think it will be visible until you get into the site.

as to footprint, the permitted scheme has 380 sq m; the refused scheme had 378 sq m so there is a negligible difference between the two.

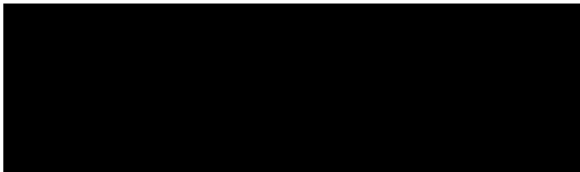

the difference was the overall shape.

in this regard i could reduce the width and increase the length, so that when you enter the site much less of the building will be obvious. it is also possible that ridge will be slightly lower as a result in the reduction in width

please can you confirm that this is what you want me to do

Dear Mr Jupp,

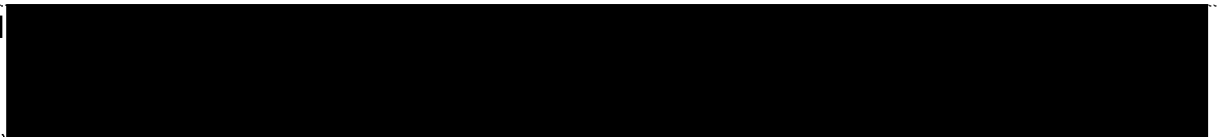

I note the approved siting and dimensions of the proposed workshop under planning permission FG/161/14/PL.

Since this proposal has a more central position and is closer to the site frontage it would be more prominent in terms of visual amenity. I would therefore appreciate consideration being given to a reduced footprint . Whilst the refused application FG/49/15 had a greater height it did have a smaller footprint and there may therefore be a possibility of the overall floor area being reduced without a need to increase the height of the building whilst still achieving the necessary storage. Without prejudice, I would appreciate revised plans within 10 days of the date of this e-mail.

Regards

Anita Gardner
