

1. (Taken from Spec) Form new vehicle access from road and new driveway as shown on drawings:
 - a. Remove existing vehicle access gate and post
 - b. Form widened crossover over grass verge in paviers, ~ (eg granite setts or similar), bedded on suitable sub-base to Structural Engineer's details.
 - c. Form new loose gravel/stone driveway on suitable compacted sub-base, on geotextile membrane complete with necessary continuous edging restraints all round to retain gravel/stone.
 - d. This will be porous and shaped to fit a turning space, allowing for flower and shrub borders.
 - e. It will only go as far west as the centre path leading to front door. The rest will remain as grass
2. See attached photo of existing, and photo of an example of proposed gravel/stone, although it may be slightly coarser.
3. It will be done near the end of the project, to allow construction vehicles off-road parking
