

REASONS FOR PROPOSED TREE WORK

T8 Hornbeam within the grounds of 37 Felpham Road, opposite 40 Gateway Lodge:

- Lateral prune to source lowest branches overhanging the wall to achieve a crown lift of 3m
- Shorten remaining branch length heading north east by 3m
 - Current branch length 6.0m
 - Finished branch length 3.0m
- Fade the pruning into the upper and lateral crown spread

The crown is extending over the boundary wall and into Gateway Lodge; as such it is causing a nuisance to the residents who live opposite the tree. The lower branches are in imminent danger of rubbing against the fabric of the adjacent property (40 Gateway Lodge).

The pruning specified will help reduce the risk of damage from occurring whilst maintaining the overall aesthetic appeal the tree offers to the area.
