Simon,

I can confirm agreement to an extension of time until 23rd October.

Kind regards,
Jessica

Hi Jessica,

Thanks for your email. I am going to need to re-consult Highways based on your email and I'm sure that a longer extension will be required. Could we agree a further 2 weeks until the 23rd October please?

Kind Regards

Subject: RE: FP/161/17 - Tesco Store, Felpham - Variation of Condition

Simon,

We have now reviewed the County's response in respect of highways. Their main concern relates to the impact of deliveries on the safe operation of the site during weekday peak hours. This concern arises from the assertion that it is difficult to manoeuvre in and out of the echelon spaces opposite the store and therefore this is likely to result in a delay with vehicles waiting close to the site access. They allege that whilst this situation could occur at any time of the day, it can be contained within the site outside of peak hours. It is asserted that during peak times however, blocking could impact the public highway due to the number of vehicles entering the site. Thus, although the County Council does not object in principle to amending the delivery condition, they propose that deliveries are restricted between the hours of 0700 to 0900 and 1600 to 1800 (considered by the County Council to be the 'peak' hours here).

Conversely our onsite observations and discussions with store management indicate that the car park operates well and would not be prejudiced by the presence of delivery hours during the weekday peak hours. However, we have now obtained sales data which provides an indication of the hourly trading performance of the store for each day. This data is provided in the attached graph and shows that the peak activity of the store occurs at two points during the trading day; lunchtime (between 1100 and 1300) and evenings (between 1600 to 1800). However, it can be seen that during the AM peak (0700 and 0900), the store is quiet relative to other periods. There is therefore no justification to limit store deliveries taking place in the morning. The car park is designed to operate efficiently whilst deliveries are occurring and data in respect of store activity identifies that this is one of the quieter periods in the trading day.

The design of the car park is one which ensures that any interaction between delivery vehicles and customers is limited and any potential delay in manoeuvring in to/out of an echelon space is momentary. Notwithstanding this and our view that there should be no restriction on the hours of delivery, the client is mindful of the activity of its store and would therefore be willing to restrict weekday deliveries between 1600 and 1800. This relates to the weekday peak activity of the store and also corresponds with the suggested peak activity of the adjacent highway.

Your Environmental Health colleagues raised no objection, but requested that no deliveries take place between 0600 to 0700, which our client is willing to accept.

Thus, in light of the foregoing, our client can accept the following amended condition:

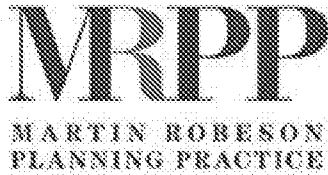

"No servicing or deliveries (with the exception of newspapers) to the retail unit hereby approved shall take place between the hours of 2300 and 0700 on any day. Additionally, there shall be no deliveries to the retail unit between 1600 and 1800 on weekdays only."

On the basis you are agreeable to our client's position we agree to a further extension of time until 13th October.

Kind regards,
Jessica

Dear Simon

Further the email of the 23/08 from Simon Davis, we have the following comments:

The information provided in support of the original application FP/133/08 does appear to focus on the impact of additional traffic on the local highway network and not on the operation of the site itself and the impact of delivery vehicles on highway safety in the immediate vicinity of the site access. However, no reason is given in the WSP Transport Review report as to why the condition restricting deliveries to outside of peak hours was recommended.

From the site visit photographs, it can be seen that manoeuvring in and out of the echelon spaces (in particular the two most easterly) spaces may be difficult for vehicles other than a small car type when deliveries are taking place. In addition, the westerly space results in vehicles reversing onto the pedestrian crossing. Whilst these manoeuvres are possible and could be shown with a traffic plot on a plan, they do appear to be limited and likely result in vehicles waiting at or close to the access for a prolonged period.

The photographs also show vehicles parked in areas within the site which are not parking spaces i.e. on either side of the access. It is appreciated that this is a decision made by drivers and difficult to manage however it is argued that this type of parking will continue to occur and does have an impact on the application.

Whilst it is acknowledged that a bottleneck could occur at any time of day due to; irresponsible parking and slow manoeuvres out of the echelon spaces, the result of such a blockage is likely to be contained within the site outside of peak times. However, during peak times has the potential to impact on the public highway due to increased demand to access the store.

The Tesco's store is indeed visible from the A2259 and it is likely that a proportion of drivers who see the car park is at capacity will not stop. However, there are also a proportion of drivers who will stop regardless. Due to the nature of the store as a convenience facility drivers may consider their visit to be a necessity during peak hours; to and from work/school run etc.

As mentioned in my previous response, no parking capacity survey/analysis of the car park operation has been submitted nor has any up-to date traffic data been submitted. The BRRR has been fully opened since March 2015 and traffic levels in the area have altered considerably and whilst there has been a reduction in through traffic there has been an increase in local traffic due to the new development and likely an increase in previously untapped demand for the A2259 (local journeys) due to less congestion.

In conclusion, there does not appear to be any up to date information on traffic flows/ car park demand/car park operation/proposed number of deliveries to support the application and therefore our objection is based on site observations at peak times and recommendations from the original application. As Highway Authority we need to ensure a site is operating safely for all road users, additional survey information may provide sufficient evidence to show that the site will still operate safely with deliveries occurring at peak time – there is also the potential to reduce/alter the peak times as local traffic peaks may be linked to school start/finish times for example.

Kind regards,

Debbie
