Hi Richard

Further to the condition suggested by Laura Gibbons, I attach the 6 month winter ground water monitoring log, as carried out by Southern Testing last year.

Can this please be added to the application.

I will also forward our drainage design in the next day or two, so we can avoid the above condition.

I have copied this to Laura Gibbons, for any comment she may have.

Kind regards

Ivon

For the attention of Phillip Roberts

Dear Sirs,

Re: Groundwater Monitoring at The Old Gunpost, Felpham.

We are pleased to attach the results of 6 months groundwater monitoring from the single monitoring well placed on site.

From the appended plot it can be seen that groundwater varied between approximately 2.1m and 1.3m below ground level. There did not appear to be any significant tidal influence on water levels (approximately 10mm difference) but when correlated with precipitation data taken from a nearby weather station there appears to be a link to the magnitude of rainfall.

The plot of groundwater level vs. time is attached along with an excel file of raw data (by email).

We trust this is of interest.

Yours faithfully,

P J Sugden
