Hedgerow created in the south-eastern extent of the site, connecting to woodland W2. Hedgerow to be created with a variety of native tree and shrub species, with creation of a species rich grassland buffer at least 2m in width. Hedgerow to be managed appropriately to promote diversity, structure and tree maturity.

Hedgerow H4 to be planted up with native tree species, as well as the creation of a species rich grassland buffer. Appropriate management to promote tree maturity and increase diversity in grassland buffer.	
Treeline T1 to be enhanced through the creation of species rich grassland habitats, and appropirate management of undesirable scrub vegetation to promote maturity of the treeline. Future management to involve replacement of diseased/fallen trees.

Ditch D1 located along the south-eastern boundary of the site, supporting suitable water levels. Scrub and tall ruderal vegetation observed on banks as well as minor riprain encroachment from the adjacent farming activities. Ditch to be retained within the development proposals.
Ditch D2 is located in the north-eastern extent of the site. This was assesed as a dry ditch supporting dense tall ruderal and scrub habitats, with encroachment either side of the ditch from farm machinary. This ditch will be retained within the development proposals.
Ditch D3 is located along the south-western boundary of the site, associated with woodland W1. The was assesed as a dry ditch supporting limited diversity. This will be retained with the development framework.
Ditch D4 is located in the northern extent of the site, connecting the northern boundary to the Ryebank rife. This ditch was dry at the time of assessment, supporting dense tall ruderal and unmanaged scrub habitats. Further riparian zone encroachment was observed from the adjacent farming operations. This ditch is to be retained within the development proposals.
