11.08	Amenity grassland proposed within and around the main development area. Grassland to support a short sward with limited floristic diversity, to be used for purplic amenity purposes.

10.41	Large woodland area to be created in the northern extent of the site, as well as smaller additions to existing woodland within the biodiversity opportunity area outlined in the Arun Local Plan 2018-2031. Habitat to be created using a range of native broadleaved tree and shrub species, at varied age ranges. Future management to include coppicing and selected felling where required to increase light penetration to the ground floor allowing woodland regeneration and increased ground flora diversity. Further addition of woodladn ground flora seed mixes may be requried to increase ground flora diversity.
11.86	Small areas of woodland habitats to be created around exsiting woodland to improve native species covarge and woodland strucutral diversity. Habitat to be created using a range of native broadleaved tree and shrub species, at varied age ranges. Future management to include coppicing and selected felling where required to increase light penetration to the ground floor allowing woodland regeneration and increased ground flora diversity. Further addition of woodladn ground flora seed mixes may be requried to increase ground flora diversity.
0.87	Multiple SuDs basins to be created across the site. These features to be planted up with native species rich grassland seed mixes and managed appropriately to promote species diversity and sward structure.
2.85	SuDs basin A located in the north western extent of the site to be partially lined to create standing water habitats. This area to be planted up with inundated and marginal plant communities to regulate drainage and promoted species diversity.

Amenity grassland to be enhanced through additional species rich seed mixes as well as appropriate management (cutting twice a year) of the grassland to develop a range of sward heights.	
Amenity grassland to be enhanced through additional species rich seed mixes as well as appropriate management (cutting twice a year) of the grassland to develop a range of sward heights.	
SI1 - To be enhanced primarily through an appropriate management scheme (cutting twice a year), to reduce the grass density and encrouage herbaceous diversity in the sward. Further additional seed mixes containing Rhinanthus minor will be using to maintain low grass densities and promote herbaceous diversity.	
W2 to be enhanced through the clearance of the dense scrub areas around the woodland to promote greater ground flora diversity and tree regeneration areas. Future management to include coppicing and selected felling to promote light penertration throughout.	
W3 - Woodland to be enhanced through additional native broadleaved and coniferous tree and shrub species planting, as well as woodland ground flora seed mixes to promote diversity. Future management to include coppicing and selected felling to promote light penertration throughout.	

W4 - Woodland to be enhanced through additional native broadleaved and coniferous tree and shrub species planting, as well as woodland ground flora seed mixes to promote diversity. Future management to include coppicing and selected felling to promote light penertration throughout.	
W13 -Woodland to be enhanced through additional native broadleaved and coniferous tree and shrub species planting, as well as woodland ground flora seed mixes to promote diversity. Future management to include coppicing and selected felling to promote light penertration throughout.	
W14 - Woodland to be enhanced through additional native broadleaved and coniferous tree and shrub species planting, as well as woodland ground flora seed mixes to promote diversity. Future management to include coppicing and selected felling to promote light penertration throughout.	
W23 - Woodland to be enhanced through additional broadleaved tree and shrub species planting, as welll as woodland ground flora seed mixes. Future management to include glade creation, through coppicing and selective felling.

Hedgerow to be created in the western extent of the site, providing connectivity between the urban areas and green infrastructure areas. Hedgerow to border ditch D3a, and be created using at least five native tree and shrub species preferably bearing nut/fruit and seeds. To be managed appropriatly to promote structure and diversity, as well as providing a 2m diverse grassland buffer strip.	
Hedgerow to be created in the central extent of the site, improving connectivity between H10 and ditches D3a and D10. Hedgerow to be created using at least five native tree and shrub species preferably bearing nut/fruit and seeds. To be managed appropriatly to promote structure and diversity, as well as providing a 2m diverse grassland buffer strip.	
Hedgerow to be created in the western extent of the site, connecting areas of suitalbe habitat in the green infrastructure in the central and northern extents. Hedgerow to be created using at least five native tree and shrub species preferably bearing nut/fruit and seeds. To be managed appropriatly to promote structure and diversity, as well as providing a 2m diverse grassland buffer strip.

H5 to be enhanced through appropriate management, promote hedgerow strucutre, diversity and future tree maturity. Further creation of species rich grassland buffers at least 2m in width to increase diversity.	
H6 to be planted up with additional native tree and shrub species, to increase diversity. Appropriate management to improve structure, diversity and creation of 2m wide species rich grassland buffers.

D1- located along the north eastern boundary of the site. Ditch supporting moderate diversity, although significant encroachment and nutrient enrichment from adajcent golf course management. This ditch is to be retained and enhacned under the development proposals
D2 - located in the southern extent of the site connecting to pond P3. This drainage ditch has supported varying water levels and supported low botanical diversity, signifcantly enriched by adjacent golf course activities. This ditch will be enhanced under the development proposals.
D3 is located in the centre of the site connecting to ditch D3a and pond P2. This drainage ditch was recorded as dry, with limted botanical communities present. Further culverts and riparian zone encroachments present from golf course. The majority of this ditch will be lost under the development proposals, with the retained sections in the north being enhanced.
D3a is located in the centre of the site, connecting to ditch D12 and D3a. This drainage ditch supported varying levels of water, with large sctions of the ditch remaining dry. Limited botanical communities were recorded, whilst the channel was culverted and significant enroachment was recorded in the riparian zone. the western section of this ditch will be retained within the development proposals.
D4 is located along the north eastern boundary of the site assocaited with hedgerow H3. This ditch was recorded as dry with limited botanical diversity present and encroachment from the adjacent golf course activities. This ditch will be retained within the development proposals.

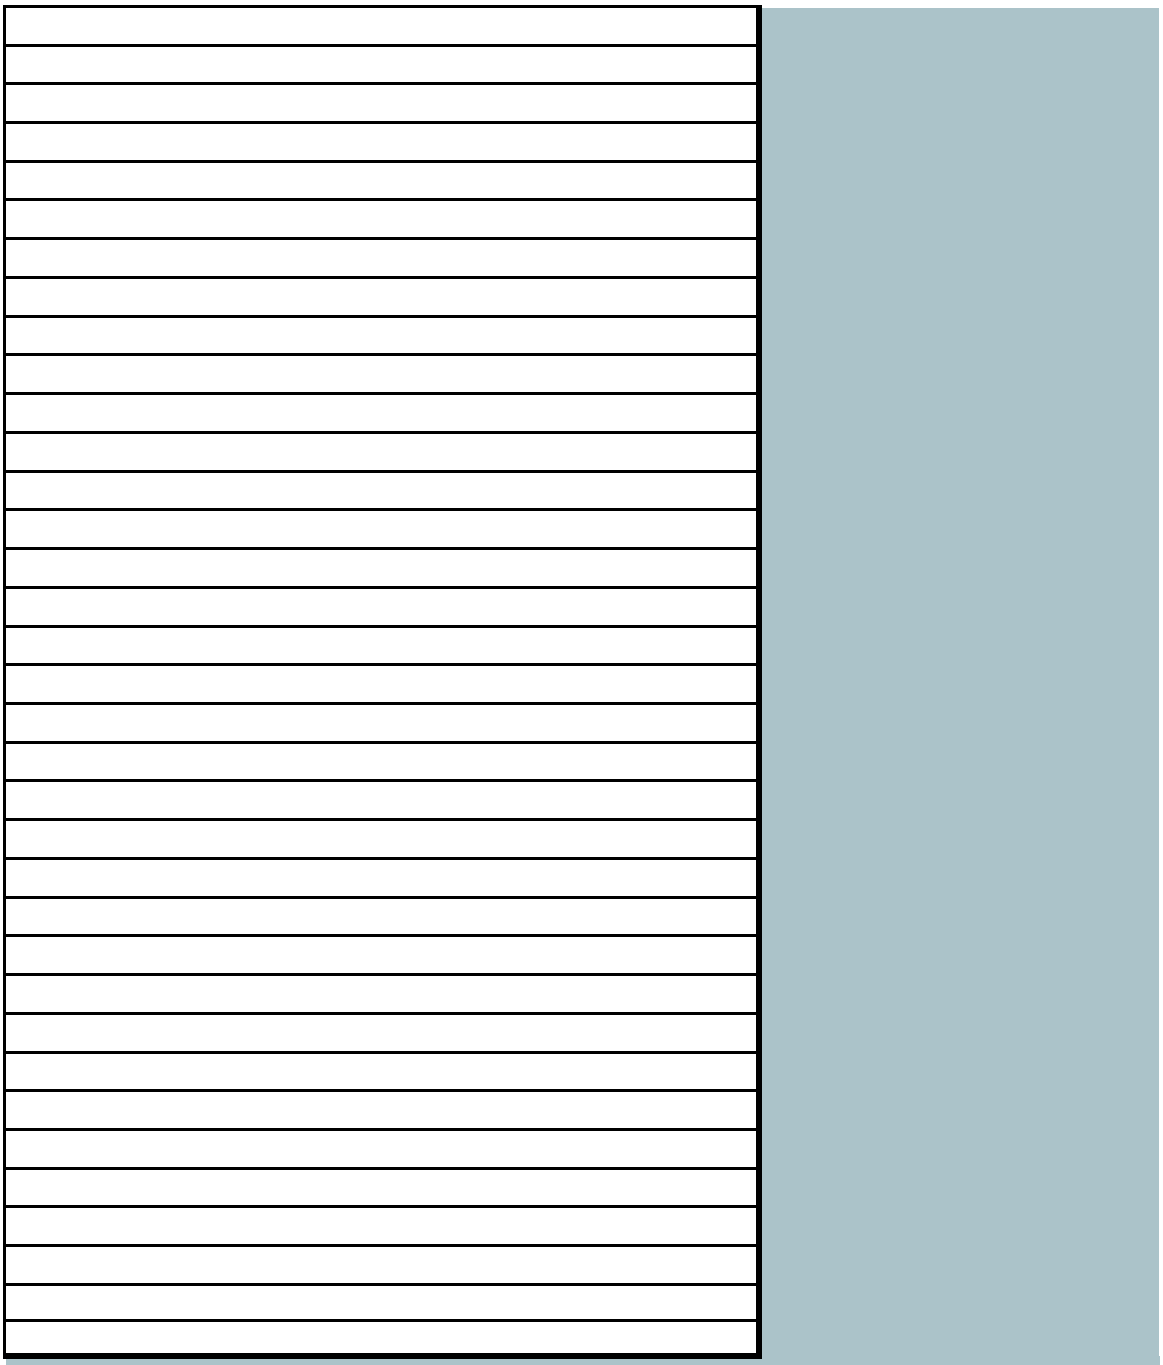

D5 is located through in the north eastern extent of the site. This drainage ditch supported varying water levels and is culverted across several holes of the golf course, resulting in major encroachment across the riparian zone. This ditch will be retained and enhanced under the development proposals.
D6 is located through in the north eastern extent of the site,
D7 is located in the southern extent of the site, connecting the Lidsey rife (offsite) to ditch D7. This ditch supported varying water levels and diverse, botanical communities.There is significant enroachment across the riparian zone from adjacent golf course activites. This ditch will be retained and enhanced under the development proposals.
D7a connects ditches D7 and D12 in the southern extent of the site. This ditch supported varying water levels, although was significantly enriched and encroached by the adjacent golf course activities. This ditch will be enhanced under the development proposals.

D9 is located in the in the northern extent of the site, connecting Lidsey rife to pond P2. This culverted drainage ditch, was dry during the time of survey, supporting limited botanical communities. Further significant encroachment of the riparian one observed. The ditch will be retained under the development proposals.
D10 is located in the in the northern extent of the site, running paralell to ditch D9. This culverted drainage ditch, was dry during the time of survey, supporting limited botanical communities. Further significant encroachment of the riparian one observed. The ditch will be retained under the development proposals.
D11 is located along the northern easter boundary of the site connecting pond P2 to ditch D8. This ditch supported varying water levels, with some botanical diversity recorded during the time of survey. Minor encroachment observed from the adjacent golf course activities. This ditch will be retained udner the developmetn proposals.
D12 is located in the central extent of the site connecting to pond P1. This ditch supported varying water levels with limited botanical communities present. This ditch was also culverted, and significantly encroached and nutrient enriched from golf course activities. A small section of this ditch will be removed under the development proposals with the remainder being retained.

D13 is located in the south eastern extent of the site. This culverted, drainage ditch was dry with limited botanical diversity present during the time of survey. Further significant riparian encroachment was observed.

Ditch D1 to be enhanced through the removal of scrub and tall ruderal vegetation and the addition of native inundated and marginal seed mixes. Further creation of a 15m buffer from the top of the bank will be planted up with species rich grassland and managed appropriatley to ensure no riparian encroachment.	
Ditch D2 to be enhanced through the removal of dense scrub and tall ruderal vegetation, present from previous nutrient enrichment. Creation o marginal and inundated communities to use native seed mixes. Whilst buffers to be put in place, to be planted up with species rich grassland and managed appropriately to promote diversity and sward structure.	
Ditch D6 to be enhanced through the creation of a species rich grassland buffer to be managed appropriatly. Further creation of inundated and marginal species rich communities will improve this linear corridor habitat.	

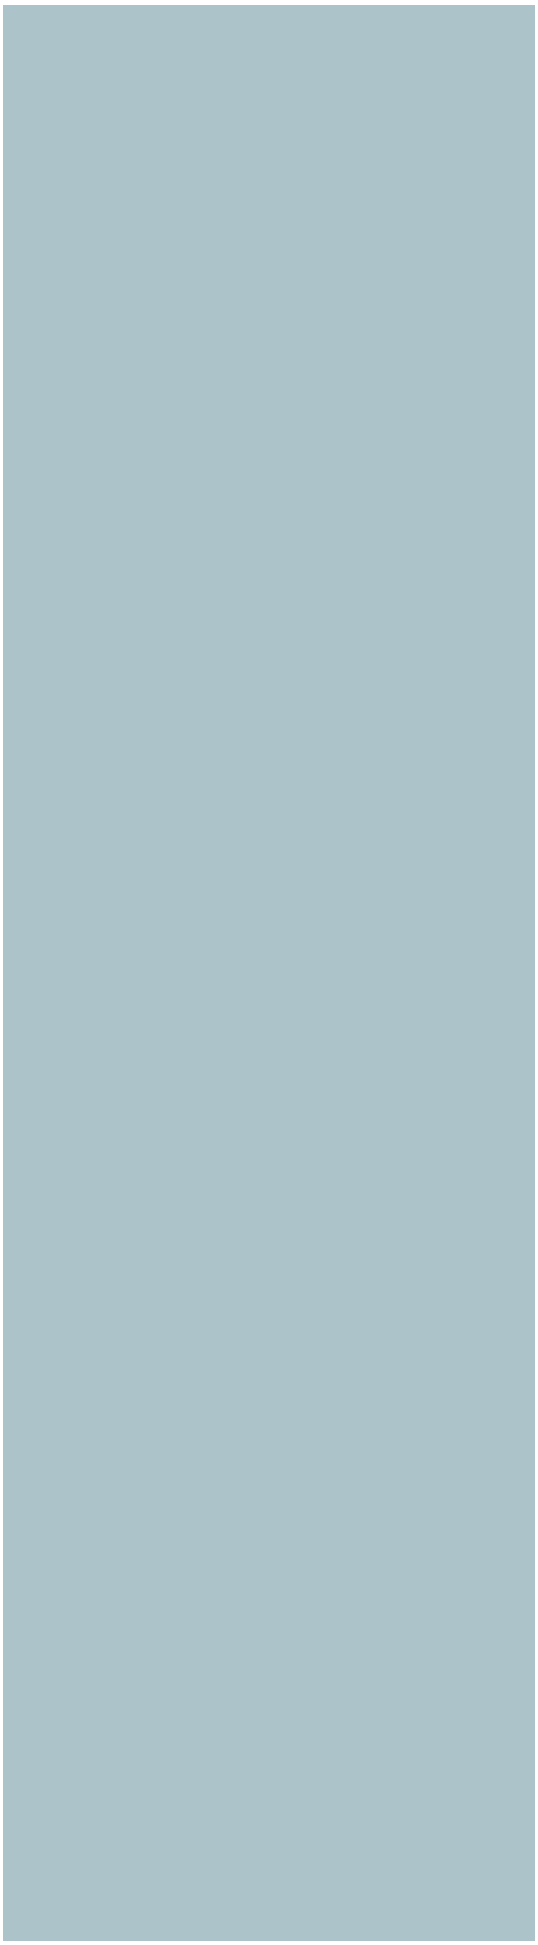

Ditch D7 will be largely removed under the development proposals, with a small section connecting the Lidsey rife to the SuDs basins create onsite. Retained ditch to be buffered with species rich grassland, and managed appropriately to promote species and structural diversity. Further marginal and inundated communities to be planted in the ditch channel.		
Ditch D8 to be enhanced through the removal of dense scrub and tall ruderal vegetation. Further creation of a species rich grassland buffer, to be appropriately managed to promote species and structural diversity to improve the wildlife corridor habitat.		
Ditch D9 to be partially removed and connected up to newely created ditches within the framework plan. It will be enhanced through the removal of dense scrub and tall ruderal vegetation as well as the creation of native inundated and marginal communities within the channel, as well as species rich grassland buffer habitat.
