AUDIT REF	Problem Summary and Recommendation	Designers Response	WSCC Comments	Agreed RSA Action
3.5 General	Summary – Existing signing may be vulnerable to vehicular strikes and/or cause injury to pedestrians due to insufficient lateral clearance. Detail – The scheme proposals indicate that localised widening is proposed in order to accommodate the improvements together with changes to the existing refuge islands. The site visit has established that there are existing signs located within footway areas and on the existing refuge islands. From the drawings provided for this audit it is unclear where these will end up being located. Concern arises that after the scheme is implemented, in appropriately sited signs may be vulnerable to vehicular strikes due to insufficient lateral clearance. Furthermore, signs remaining close to or within footway area may not currently be at an appropriate mounting height whereby pedestrians may sustain injury. Recommendation – The Audit Team recommend that at the detailed design stage that signs are sited appropriately and as suitable mounting heights.	From a review of the junction based on the photos taken from a recent site visit there is only one sign which is a road name plate situated on Downview Road western arm, that would need to be repositioned. There does not appear to be any other signage to considered. This however will be reviewed in detail as part of the detail design process.	Accept Auditor recommendation and Design Organisation's response to it.	That at the detailed design stage that signs are sited appropriately and at suitable mounting heights.

Design Organisation Statement

On behalf of the design organisation, I certify that:	
1) The RSA actions identified in response to the road safety audit problems in this road safety audit have been discussed and agreed with the Overseeing Organisation	
Name	Melanie A'Lee
