Good Morning Hannah,

1no. Oak Tree (T1) reduce large horizontal structure limb facing North by 3m leaving limb approximately 3m.
1no. Ash Tree (T2) cut back to previous pruning points on North side of canopy leaving tree approximately 18m high and 14m in spread.

Thanks

Dear Shaun,

Thank you for your reply and the extra information which is helpful however the measurements given will still not allow us to check the proposed works have not been exceeded.

The validation requirements give the following example:

*A crown reduction should always be provided as a measurement in metres of the height and spread of the tree after pruning rather than the amount being removed.
Eg. a crown reduction to reduce the height of the tree to 1 m and the spread of the tree to 0.5m.*

Please can you confirm approximate dimensions of the trees after the proposed work?

1no. Oak Tree (T1) reduce large horizontal structure limb facing North by 3m leaving limb approximately Xm.
1no. Ash Tree (T2) cut back to previous pruning points on North side of canopy leaving tree approximately Xm high and Xm in spread.

Kind regards,

Hannah

Good Morning Hannah,

What you have said in your attachments regarding the two trees is correct.

The Ash Tree - we are requesting a 3m reduction

The Oak Tree - we are requesting a 2m reduction & thinning on one limb.

Please let me know if this is the information you require.

Thanks

Dear Shaun,

Thank you for the extra information however, we still need more detail. I have attached our validation requirements to this email so you can read over what is required.

I have updated the description of your application based on the information in your last email.

- Please can you check and confirm you are happy I have identified the trees correctly based on your sketch plan and your description?
- Please confirm approximate tree measurements after proposed works so that we can check, if the work is undertaken, that the amount of agreed work has not been exceeded.

Kind regards,

Hannah

Good Evening

In response to your three questions on my Planning Application I respond as follows:

The Tree on the right is an Ash Tree

Cutting back regeneration growth to previous pruning points that were last carried out approx 10 years ago.

This is to reduce risk of limb throw in high winds as limb length is approaching Property which could sustain damage.

Also to reduce shading in the garden.

Pruning to be carried out on the Northern side of the canopy.

The tree on the left is an Oak Tree.

Carry out end weight reduction to a large horizontal structure limb facing North, to reduce the risk of limb failure

in bad weather which could result in damage to persons or property.

Both trees would benefit from dead wood removal on limbs over 50mm in diameter.

Should you require any further information then please do not hesitate to ask.

Thanks

Shaun Salmon
