

Application No: FP/86/21/PL
Site Address: 7 Ambleside Close Felpham PO22 8NG
Description of Works: Erection of 1 No. 3 bed dwelling (resubmission following FP/179/20/PL).
This site is in CIL Zone 4 & is CIL Liable as new dwelling.

Bats:

The Ecological assessment report (March 2021) concluded a negligible potential to support roosting bats within the garage and shed, and therefore did not recommend any further surveys. However, the lighting scheme for the site will need to take into consideration the presence of bats in the local area. The scheme should minimise potential impacts to any bats using the trees, hedgerows and buildings, especially around the northern boundary of the property, by avoiding unnecessary artificial light spill through the use of directional light sources and shielding.

We require that a bat brick is integrated into the building onsite facing south/south westerly positioned 3-5m above ground.

Nesting Birds:

Any works to the trees or vegetation clearance on the site should only be undertaken outside of the bird breeding season which takes place between 1st March – 1st October. If works are required within this time an ecologist will need to check the site before any works take place (within 24 hours of any work).

A check will also be required for birds' nests within the building prior to work commencing. If nesting birds are found, works in the area will need to be avoided and the nest protected until after the young have fledged.

We would like a bird box to be installed on the extension / and or tree within the garden of the property.

Reptiles:

To ensure the site remains unsuitable for reptiles, continued management of the site must take place to ensure reptile habitat does not develop onsite. If this is not possible then a precautionary approach should be taken within the site with regards to reptiles

Hedgehogs:

Precautions should be put in place for hedgehogs and the site will need to be searched carefully before works begin. If any small mammals including hedgehogs are found they should be relocated away from the construction area into surrounding suitable habitats.

Any brush piles, compost and debris piles on site could provide shelter areas and hibernation potential for hedgehogs. These piles must be removed outside of the hibernation period mid-October to mid-March inclusive. The piles must undergo soft demolition. A hedgehog nesting box should be installed within the site to provide future nesting areas for hedgehogs

Biodiversity Net Gain:

In line with Policy ENV DM5 of the Arun District Local Plan information on Biodiversity Net Gain needs to be provided as part of the planning application prior to determination. Though some biodiversity enhancements have been recommended within the EIA (Oct 2019) further information is required demonstrating what will be included within the scheme. Examples of what we would be expecting to see include;

- Any trees removed should be replaced at a ratio of 2:1
- Filling any gaps in tree lines or hedgerows with native species
- Bat bricks / tiles are integrated into the buildings onsite facing south/south westerly positioned 3-5m above ground.
- Bird box to be installed on the buildings / and or tree within the garden of the property.
- Grassland areas managed to benefit reptiles.
- Log piles onsite
- We require that gaps are included at the bottom of the fences to allow movement of small mammals across the site
- two hedgehog nesting boxes included on the site
