| | The grassland has been assessed as being Other Neutral Grassland, subset category g3c6 Lolium-Cynosurus, within the UK Habitat Classification - Habitat Definitions, please refer to species present within accompanying EcIA. The condition assessment result of poor is based on the Biodiversity Metric 3.0 Technical Supplement, 6 Grassland - Medium, High & Very High Distinctiveness (Page 158). The current grassland only satisfies criteria 3 and 4. The grassland is closely mown regularly, contains undesirable species and the indicator species for this specific grassland habitat are not clearly visible throughout the sward. |

| The post condition assessment of fairly good can be achieved based on the Biodiversity Metric 3.0 Technical Supplement, 6 Grassland - Medium, High & Very High Distinctiveness (Page 158). We believe all five criteria can be achieved via the introduction of broadcasting purposely designed grassland seed mix into the current seed bed, where undesirable species have undergone targeted removal and by introduction of a relaxed maintenance regime to encourage grassland sward height. All of which will satisfy criterion 1, 2 and 5. | |
