Hello Laura,

The overflow from the proposed reservoir at Wicks Farm will discharge into the ditch that runs along the Northern boundary of the field. This ditch joins the major drainage channel at Ford before passing under the Ford Road and then directly into the River Arun.

Would it help if I marked this on a plan?

Many thanks, John.

Hi John,

My main concern is the location of this proposed overflow. I.e. which watercourse are you discharging to and where? Without this information the fundamental concepts cannot be agreed.

Thanks,

Laura Gibbons, MEng, GMICE

Morning Laura,

I don't yet have the detailed design drawings for the proposed new reservoir at Wicks Farm; so I can't show you the detail of the overflow system; however; I'm attaching a copy of the design plans that we used for the new reservoir at Seftor Farm, Pagham. We completed that build in November 2018 and I've also attached a photo of the completed reservoir.

Andrew – We'd be pleased to deal with this under Conditions.

Many thanks, John.

Hi John,

Can you please update the surface water drainage proposals to clearly show this proposed overflow to the ditch system?

Thanks,

Laura Gibbons, MEng, GMICE

Hello Laura,

Thank you for your comments concerning our application to erect multispan polythene tunnels at Wicks Farm, Ford – F/30/18/PL.

We have already explained and shown to ADC our proposals for the site; including:

- The Access & Design Statement
- A detailed Flood Risk Assessment
- A full Topographical Survey showing all the levels for the site
- An Environmental Survey
- A Landscape and Visual Impact Assessment

The Access & Design Statement explains and the technical drawing shows that all the rain water falling on the multispan polythene tunnels will drain North to the new reservoir planned for the lowest part of the field. An overflow system will be designed to take surplus water to the existing local ditch system and onward directly to the River Arun.

There are no plans to drain any rain water towards the Public Right Of Way (PROW).

I would be very happy to meet you on site to discuss this further if you still have concerns about this application.

Many thanks, John.

Hi Andrew,

The attached does not alter my comments.

And no the information is inadequate, at the minute I have no confidence that the proposals will not increase flood risk elsewhere, including the PRoW. Clarification of where the surface water is discharging would be a good start. Proposed levels across the site would also be of benefit.

Thanks,

Laura,

I note this FRA appendices was submitted after your comments were received/uploaded.

Does this alter your comment?

Also does the drainage information provided provide evidence that the Public Right Of Way to the west of the site and along the proposed access road will be adequately protected in terms of surface water drainage?
Is any more information required to demonstrate this?

Thanks Andrew Wood
