

Application No: F/5/20/PL

The site of the proposed overflow car park is in an area that has been demonstrated to contain features and deposits of archaeological interest, not least in 1999 in advance of the construction of the wastewater treatment works (immediately to the west) and in 2003-6 for the waste recycling centre (about 500m to the south). In the circumstances this site should be evaluated ahead of development in order to identify anything of interest that it might contain and to enable measures to ensure suitable conservation (i.e. through further investigation and/or preservation in-situ). This process to be secured via the imposition of standard condition ARC1.
