

Sworn Statement

I confirm that the land at Unit A, Rudford Industrial Estate, Ford Road, Ford is being used by Jablite for Industrial (B2 and/or B8) uses only.

Jablite are a leading producer of Expanded Polystyrene products for the Construction Insulation and Packaging markets. The Ford site use a shape moulding production process. The Raw Material is processed through an expander to "puff up" the beads. It then sits in a silo to mature for a specific period of time depending on the final application it is designated to be used for. After that the expanded beads are pumped into a shape mould to create the finished product. The finished product will then be packed ready to be shipped to the end customer.
