Good Morning Kathryn

I refer to your letter attached and the reference numbers above.
You required a clearly labelled plan of all the tree positions which I have highlighted on the attached plan for you to consider.

Scots Pines

To be reduced in height by 2 meters to suitable growth point and any branches interfering with units reduced.
Currently 14-15 meters in height and a total of 9 to be reduced.

Sycamores

6 Sycamores highlighted on the attached plan. They are 8-10 meters in height and do not need to be reduced as they have been swamped by surrounding taller trees. Will be left to keep a more uniform shape and a chance to catch up with surrounding trees.

The remaining Sycamores are 13-14 meters in height with a crown spread of 7-9 meters. Height reduction of 2 meters and crown reduced accordingly again around 2 meters. Majority of crown reduction will be to the front of the trees as lateral growth has been restricted due to being close to one another.

All trees are to keep a natural shape and form.

I trust this answers the queries you had, and you can now complete this application.

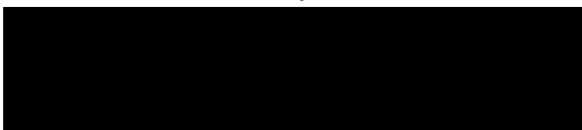

If I can be of further assistance, please do not hesitate to contact me.

Kind regards

Richard Bates Tech (IOSH)
Business Development Consultant
