

2 CONNAUGHT ROAD
LITTLEHAMPTON

WASTE MINIMISATION STATEMENT

In preparing the proposals, various matters have been considered in respect of minimising waste and using recycled materials wherever possible.

Demolition

Only minimal demolition is required and relates to the creation of a new opening in an external wall. The applicant will whenever possible reuse existing materials in the new extension. Examples of materials that can be reused include:

- whole bricks salvaged and cleaned to be re-used in external walls
- broken brick used as oversite sub-base or fill for new soakaway

Excavation

Excavated material will be redistributed over the garden area wherever possible.

Construction

During the construction phase the applicant will minimise the amount of waste produced by ordering correct and manageable quantities of materials. Materials stored on site will be adequately protected to avoid waste from accidental damage.

Pallets used for delivery of materials to site will be set aside for collection by a local pallet disposal service.

Standard sized components will be used wherever possible to reduce cutting.

The contractor will be instructed to source materials locally wherever possible.

Supervision

The contractors will designate a specific person who has the responsibility of ensuring suitable management and separation of waste on site and proper disposal from site.
