

# EnviroSmart

## Phase 1 Contaminated Land Assessment

**Site address**

57 River Road  
Littlehampton  
Arun  
BN17 5BZ

**Date issued**

October 2024

**Report status**

Final

**Grid Reference**

502350, 102130

**Site Area**

0.06 ha

**Report prepared for**

Brownfield Estates Ltd

**Report reference**

83247R1

## Risk – Moderate/Low

Given the nature of the historical land use and therefore the potential for contamination to be present at the Site, it is recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

## Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

### Site analysis

|                                                                      |                       |  |
|----------------------------------------------------------------------|-----------------------|--|
| 1. <b>Probability/likelihood</b> of a contaminant hazard at the Site | High likelihood       |  |
|                                                                      | Likely                |  |
|                                                                      | <b>Low likelihood</b> |  |
|                                                                      | Unlikely              |  |
| 2. Potential <b>severity/consequence</b> of any impacts              | Severe                |  |
|                                                                      | <b>Medium</b>         |  |
|                                                                      | Mild                  |  |
|                                                                      | Minor                 |  |
| 3. <b>Overall land quality risks posed by the Site</b>               | Very high             |  |
|                                                                      | High                  |  |
|                                                                      | Moderate              |  |
|                                                                      | <b>Moderate/low</b>   |  |
|                                                                      | Low                   |  |
|                                                                      | Very low              |  |

### Summary of existing and proposed development

The Site is currently an unoccupied commercial plot, comprising a long-standing structure formerly used as a vehicle repair garage / motor mechanics, as well as an associated yard area. Development proposals comprise the partial demolition and change of use of the existing structure to enable the construction of six apartments with private amenity space (hard standing), parking area and cycle storage. The development plans also allow for the partial demolition of a boundary wall to provide a new pedestrian access including the creation of a floating pontoon with resident mooring spaces.

### Environmental Setting

The underlying superficial geology consists of Raised Beach Deposits which are classified as a Secondary (A) Aquifer; the bedrock geology consists of the Lewes Nodular Chalk Formation which is classified as a Principal Aquifer.

The nearest water feature is the River Arun, located adjacent to the southwest of the Site boundary.

There are no environmentally sensitive land uses within 500 m of the Site.

### Site History

The Site was developed prior to the 1870s, including an undefined building (which remains to the present day) in the northwest. Historical uses of the Site include a works / plastic works and wharfage from the 1950s and later a repair garage / auto mechanic shop. Off-Site land uses include various former industrial sites including works / factories and depots, as well as various residential and commercial sites, including garages and public houses. The land to the west of the River Arun is occupied by various boat yards / docks and also a historical landfill.

### Radon

The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m<sup>3</sup>).

### Coal Mining

The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues.

## Summary of Conceptual Site Model (CSM)

### Source of Contamination

Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils. Potential for volatile organic contaminants to be present within the subsurface soils. Potential for asbestos containing materials within the subsurface soils. Potential for dissolved phase contaminants to be present within shallow groundwater. Limited potential for elevated methane and carbon dioxide to be present within the sub-surface soils.

### Receptors

Human Health, Controlled Water (groundwater within the underlying superficial Secondary (A) Aquifer and bedrock Principal Aquifer; and the nearest surface water feature (River Arun) positioned directly adjacent to the southwest).

### Human Health (pathway)

Ingress into water supply pipework and subsequent water ingestion. Migration of vapours to surface; inhalation indoors. Lateral migration of any localised gases towards on-Site buildings.

### Controlled Waters (pathway)

Dissolution into pore water/shallow groundwater and subsequent migration. Dissolution into aqueous phase and preferential migration via drainage structures. Lateral and vertical groundwater movement via natural or artificial flow paths.

## Preliminary Risk Assessment

Overall, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be **Low / Moderate**.

## Recommendations / Next Steps

### Phase 2 intrusive investigation

Given the nature of the historical land use and therefore the potential for contamination to be present at the Site, it is recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

# 1. Introduction

## 1.1 Background

The study site (from herein known as 'the Site') is situated at 57 River Road in Littlehampton, Arun. A location plan of the Site is shown in Section 1.5. A proposed development plan of the Site is shown in Section 1.6.

GeoSmart was commissioned by Brownfield Estates Ltd in September 2024 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested by Arun District Council in order to support Planning Application Reference LU/251/21/PL (planning condition Nr 5).

The proposed development is for the partial demolition and change of use of the existing premises to erect six apartments with private amenity space, parking area and cycle storage. The development also includes the partial demolition of a boundary wall to provide a new pedestrian access including the creation of a floating pontoon with resident mooring spaces.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

## 1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

## 1.3 Report contents

This report is divided into two sections, as described below:

| Section                                      | Content                                                                                                                                 | Purpose                                                                                                                                                                     |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Section 2:<br><b>LAND QUALITY ASSESSMENT</b> | A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations | To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present  |
| Section 3:<br><b>SUPPORTING INFORMATION</b>  | A collection of site specific information on which the land quality assessment is based                                                 | To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments |

## 1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

|                                                                                                                                                                                              | 1958 | The Site is mapped as a wharf. The on-Site building appears to be part of a works (which extends to the north-west). | Numerous unspecified works are mapped in the locality of the Site, including: adjacent to the southeast and northwest of the Site, c. 40 m southeast, c. 45 m east, c. 130 m southeast, c. 70 - 90 m west / southwest and c. 190 m southeast. A garage is mapped c. 160 m west. A warehouse is mapped c. 100 m southeast. A builder's yard is mapped c. 100 m northeast. The shipbuilding yard c. 100 m south is no longer mapped. The laundry c. 165 m north is no longer mapped.                                                                                                                                                                                                                                                               |                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |        |                              |

|--------|------------------------------|
| LIKELY | PROBABILITY OF CONTAMINATION |
|--------|------------------------------|

**Boat & shipbuilding yards:**

- Potential for bulk storage of fuels and/or miscellaneous chemicals.
- Miscellaneous small scale fuel and oil spills relating to the presence of boats / vehicles /parking associated with the boat yard.
- Potential for localised/historical deposition of construction waste materials/effluents.
- Made Ground associated with former development/demolition activities.
- Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.

**Electricity substations:**

- Potential for Polychlorinated Biphenyls (PCB) contamination to have occurred.
- As several of the identified electricity sub stations were constructed before 1980, it is considered possible that PCBs would be present as the use of PCBs ceased in the late 1970s. However, as the substations are located at a reasonable distance to the Site (>100 m), this potential source will not be carried forward into the risk assessment.

**Depots:**

- Miscellaneous fuel and chemical spills or leaks.
- Miscellaneous material storage.
- Potential for Made Ground.

## 2.2 Conceptual understanding (potential sources of contamination)

|                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                       |                         |                                                                                       |                                    |                    |        |                              |

|                                                                                                                                                                                                     | 2024                                                                                                                                                                                                                                                                                                                  | No changes on-Site.     | The adjacent garage is no longer mapped. A public house is mapped c. 110 m northwest. |                                    |                    |        |                              |
| Additional information                                                                                                                                                                              | It is understood from information provided by the Client that the Site was previously occupied by Riverside Motors mechanics. According to a Design & Access statement (JPA, 2021), the Site is occupied by a yard and derelict warehouse on-Site, which is a remnant of the historic working riverfront of the area. |                         |                                                                                       |                                    |                    |        |                              |

## 2.2 Conceptual understanding (potential sources of contamination)

|                                                                                                                                                                                                         |                                                                                                                                                                                           |                                              |                                                |                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                       |

|  <p><b>EA recorded pollution incidents</b><br/>(see environmental data report in Section 3.3 for full listing)</p>                                        | <p>One or more Environment Agency pollution incidents have been recorded within 250 m of the Site. These include:</p> <p>An incident occurred in 1998 c. 45 m southeast of the Site. The pollutant was diesel oils (including agricultural) caused by oils / related products and the incident was categorised as minor.</p> <p>An incident occurred in 1993 c. 75 m northwest of the Site. The pollutant was other oils caused by oils / related products and the incident was categorised as minor.</p> <p>An incident occurred in 1992 c. 210 m west of the Site. The pollutant was other oils caused by oils / related products and the incident was categorised as minor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>POTENTIAL SOURCES OF CONTAMINATION</b> | <p>Given the scale, timing, location and nature of the recorded incidents these past events do not appear to pose a significant contamination hazard to the Site.</p>                                                                                                                                                                                                                                                                                                                                                                                                 | <b>UNLIKELY</b>       | <b>PROBABILITY OF CONTAMINATION</b> |
|  <p><b>Landfills / waste sites</b><br/>(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)</p> | <p>There are no BGS recorded landfills located within 500 m of the Site.</p> <p>There are one or more Environment Agency listed historical landfills located within 500 m of the Site. These include:</p> <p>Littlehampton Ferry Road South Landfill is located c. 135 m west of the Site; the landfill received inert, commercial and household waste between 1946 and 1975.</p> <p>There are no registered landfills located within 500 m of the Site.</p> <p>There are no Local Authority listed historical landfills located within 500 m of the Site.</p> <p>The following relevant commercial services are located within 500 m of the Site:</p> <p>Eco-reco (scrap metal merchants) c. 110 m south. Category: recycling services.</p> <p>The following other waste sites are registered within 500 m of the Site:</p> <ul style="list-style-type: none"> <li>1 Records of registered waste transfer sites.</li> <li>Farndell &amp; Gates Ltd is located c. 450 m northwest. Dated: 1st June 1987. Licence status: lapsed/cancelled/defunct.</li> <li>0 Records of registered waste treatment or disposal sites.</li> <li>0 Records of licenced waste management facilities.</li> </ul> |                                           | <p>Despite the presence of a historical landfill within 250 m of the Site, given the location of the landfill (on the opposite side of the River Arun) and also the time that has elapsed since infilling ceased, the landfill is considered unlikely to pose a significant contamination hazard in relation to the Site.</p> <p>The nearby waste management site is not thought to represent a significant source of contamination which may impact on the Site given the relative distance to the Site and the regulated nature of current / recent activities.</p> | <b>LOW LIKELIHOOD</b> |                                     |

## 2.2 Conceptual understanding (potential sources of contamination)

|                                                                                                                   |                                                                                                                                                    |                                           |                                                                               |                 |                                     |

## 2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

|                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      |                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------|
|  <p><b>Geology and Groundwater</b><br/><i>(see the environmental data report in Section 3.3 for full details)</i></p> | <p>British Geological Survey mapping indicates that the underlying superficial geology consists of Raised Beach Deposits (RBD1) which comprise of sand and gravel and are classified as a Secondary (A) Aquifer.</p> <p>British Geological Survey mapping indicates that the bedrock geology consists of the Lewes Nodular Chalk Formation (LPCK) which comprises of chalk and is classified as a Principal Aquifer. It is noted that the local groundwater quality may be impacted by the tidal nature of the adjacent water course.</p> <p>According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2024). The risk of groundwater flooding at the Site is moderate to 'high'.</p> <p>The Site does not lie within a groundwater Source Protection Zone (SPZ).</p> <p>There are no groundwater abstraction licences within 1 km of the Site.</p> | <p><b>POTENTIAL RECEPTORS</b></p> | <p>A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.</p> <p>A Principal Aquifer comprises rock or drift deposits that have high permeability - meaning they usually provide a high level of water storage. They may support strategic water supply and/or river base flow.</p> <p>Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment should be considered for the Site.</p> <p>The depth to groundwater beneath the Site is unknown.</p> <p>The absence of any groundwater abstractions does not necessarily indicate a low resource potential. Small scale abstractions, such as for private water supplies, may not be listed.</p> | <p><b>SEVERE</b></p> | <p><b>POTENTIAL SEVERITY OF IMPACT</b></p> |

| 1                                                                                                                            | Potential for <b>inorganic</b> and low volatility organic contaminants to be present within the subsurface <b>soils</b> | Dermal contact, ingestion & inhalation of soils & soil dust       | HH   | Future Site occupants | MEDIUM      | UNLIKELY       | LOW RISK            | Given the Site's historical use as works, wharf and a garage, some sources of inorganic and low volatility organic contaminants may be present within the sub surface, which could impact future Site users. However, given the proposed presence of hardstanding across the Site, no routine exposure to in-situ soils (and any associated contamination) is considered likely. It would be prudent to ensure any new / future water supply is installed in clean fill trenches utilising barrier pipework as a precaution. |

| 5  | Potential for <b>inorganic</b> and low volatility organic contaminants to be present within the subsurface <b>soils</b> | Dissolution into pore water/shallow groundwater and subsequent migration          | CW   | Raised Beach Deposits (a Secondary (A) Aquifer)     | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> | The potential presence of contaminants associated with the historical Site land uses could impact groundwater quality within the superficial and bedrock deposits. These risks may however be constrained by the tidal setting (i.e., some saline intrusion may be present in relation to the underlying aquifers); this may also be reflected in the absence of any licensed groundwater abstractions or SPZs within the locality. |
| 6  |                                                                                                                         | Dissolution into pore water/shallow groundwater and subsequent migration          | CW   | Lewes Nodular Chalk Formation (a Principal Aquifer) | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 7  |                                                                                                                         | Dissolution into pore water/shallow groundwater and subsequent lateral migration  | CW   | River Arun (adjacent to the southwest)              | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> | As the watercourse is located along the southwestern boundary of the Site, there is potential that any contaminants present on the Site could impact the watercourse, due to groundwater movements, preferential migration or direct surface runoff.                                                                                                                                                                                |

| 15 | Potential for <b>volatile organic</b> contaminants to be present within the subsurface <b>soils</b> | Dissolution into pore water/shallow groundwater and subsequent migration          | CW   | Raised Beach Deposits (a Secondary (A) Aquifer)     | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> | The potential presence of contaminants associated with the historical Site land uses could impact groundwater quality within the superficial and bedrock deposits. These risks may however be constrained by the tidal setting (i.e., some saline intrusion may be present in relation to the underlying aquifers); this may also be reflected in the absence of any licensed groundwater abstractions or SPZs within the locality. |
| 16 |                                                                                                     | Dissolution into pore water/shallow groundwater and subsequent migration          | CW   | Lewes Nodular Chalk Formation (a Principal Aquifer) | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 17 |                                                                                                     | Dissolution into pore water/shallow groundwater and subsequent migration          | CW   | River Arun (adjacent to the southwest)              | <b>MEDIUM</b> | <b>LOW LIKELIHOOD</b> | <b>MODERATE/LOW RISK</b> | As the watercourse is located along the southwestern boundary of the Site, there is potential that any contaminants present on the Site could impact the watercourse, due to groundwater movements, preferential migration or direct surface runoff.                                                                                                                                                                                |

| 28                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Potential for both inorganic and volatile organic contaminants to be present within the subsurface soils | Dermal contact, ingestion & inhalation of soils & soil dust       | HH   | Future Site occupants | MEDIUM      | UNLIKELY    | LOW RISK            | Various former industrial sites have been identified in close proximity to the Site (<50 m) which may have given rise to some localised ground contamination, it is noted that the majority of these sites are no longer active. It is understood from aerial mapping and the design & access statement prepared for the Site (JPA, 2021) that many of these sites are now occupied by residential developments. Some active commercial sites (including a public house) and a railway line remain present, although these are sufficiently remote from the Site to pose no significant risk. Any health risks posed by off-Site sources will also be constrained by the proposed presence of hardstanding across the Site. |

| <b>Off-Site sources:</b><br>- Littlehampton Ferry Road South Landfill c. 135 m west; the landfill received inert, commercial and household waste between 1946 and 1975. |                                                                                         |                                                                                        |      |                                        |               |                 |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 33                                                                                                                                                                      | Potential for elevated <b>methane</b> to be present within the sub-surface <b>soils</b> | Lateral and vertical migration into on-Site buildings; potential to cause an explosion | HH   | On-Site properties and their occupants | <b>MEDIUM</b> | <b>UNLIKELY</b> | <b>LOW RISK</b>     | <p>Given the presence of a former landfill within 250 m of the Site, there is the potential for gas generation which could potentially impact the Site. However, there are a number of factors which significantly reduce the likelihood of landfill gas affecting the proposed development, including:</p> <ul style="list-style-type: none"> <li>- The age of the waste. Infilling ceased in ~ 1975 which indicates that the majority of the waste has been insitu for over 50 years. Typically a landfill will achieve its peak gas generation potential within around 30 years following deposition, as such even if large quantities of putrescible material had been deposited the rate of gas generation will now be in decline.</li> </ul> <p><i>Continued below.</i></p> |

## 2.5 Preliminary Risk Assessment

| Nr                                                                                                                                                                      | Sources                                                                                       | Pathways                                                                               | TYPE | Receptors                      | Consequence   | Probability     | Risk classification | Comments                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|------|--------------------------------|---------------|-----------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Off-Site sources:</b><br>- Littlehampton Ferry Road South Landfill c. 135 m west; the landfill received inert, commercial and household waste between 1946 and 1975. |                                                                                               |                                                                                        |      |                                |               |                 |                     |                                                                                                                                                                                                                                                                                                                             |
| 34                                                                                                                                                                      | Potential for elevated <b>carbon dioxide</b> to be present within the subsurface <b>soils</b> | Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation | III  | Occupants of on-Site buildings | <b>MEDIUM</b> | <b>UNLIKELY</b> | <b>LOW RISK</b>     | - The influence of the River Arun. The presence of a major water course inbetween the landfill and the Site will likely present a hydraulic barrier to any lateral gas migration.<br>- The distance from the Site. The landfill is situated over 100 m from the Site, further constraining the likelihood of gas migration. |

### Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

## Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.

Tel: 01743 298100

Email: [info@geosmartinfo.co.uk](mailto:info@geosmartinfo.co.uk)

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

### The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

### The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

### Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.

*Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.*

### TPOs contact details:

The Property Ombudsman scheme  
Milford House  
43-55 Milford Street  
Salisbury  
Wiltshire SP1 2BP

You can get more information about the PCCB from [www.propertycodes.org.uk](http://www.propertycodes.org.uk)

Please ask your search provider if you would like a copy of the search code

## Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs) [REDACTED]

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Martin Lucass  
Commercial Director  
GeoSmart Information Limited  
Suite 9-11, 1st Floor  
Old Bank Buildings, Bellstone  
Shrewsbury  
SY1 1HU

**Photograph 1: Derelict garage in the north of the Site as seen from River Road, facing southwest.**

**Photograph 2: Entrance to the on-Site yard area adjacent to the old garage as well as neighbouring residential land as seen from River Road, facing southwest.**

**Photograph 3: The existing garage and adjacent yard area (used for vehicle parking), facing northwest.**

**Photograph 4: The existing garage and yard area as well as neighbouring residential buildings, facing northeast.**

**Photograph 5: The River Arun flowing adjacent to the southwest of the Site.**

**Photograph 6: Part of the yard area in the south of the Site and adjacent residential land, facing southeast.**

**Photograph 7: The existing garage on Site, facing northeast. Neighbouring residential land can be seen adjacent to the garage.**

**Photograph 8: Partial view of the existing garage in the northwest of the Site as well as neighbouring residential buildings and the River Arun.**

**Photograph 9: Close up of the existing garage on Site shown to be in a dilapidated state.**

**Photograph 10: Close up of the existing garage on Site shown to be in a dilapidated state.**

## 3.2 Site photographs

**Photograph 11: The yard area present on-Site - currently in use as car parking; looking southwest.**

**Photograph 12: Neighbouring residential buildings along River Road as seen from the yard area, looking northeast.**

**Photograph 13: The existing garage and associated yard area, looking northwest.**

**Photograph 14: The Site and neighbouring land as seen from the western bank of the River Arun, looking northeast.**

## 3.3 Environmental data report

Readily available environmental information relating to the Site and its surrounding area has been provided by Landmark.

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

## Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

## Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Please note that the Environment Agency / Natural Resources Wales / SEPA have a charging policy in place for enquiries.

## 3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

| Classification         | Definition                                                                                                                                                                                                                                                               |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>High likelihood</b> | There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.                                                                       |
| <b>Likely</b>          | There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term. |
| <b>Low likelihood</b>  | There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.                                   |
| <b>Unlikely</b>        | There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.                                                                                                                                           |

Table B: Classification of consequence

| Classification | Receptor          | Definition                                                                                                                                       | Examples                                                                                                       |
|----------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>Severe</b>  | Humans            | Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance                          | High concentrations of cyanide on the surface of an informal recreation area                                   |
|                | Controlled waters | Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource | Major spillage of contaminants from site into controlled water                                                 |
|                | Property          | Catastrophic damage to buildings/property                                                                                                        | Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied) |
|                | Ecology           | A short-term risk to a particular ecosystem, or organism forming part of such eco-system                                                         | Potentially long term derogation of a designated site or protected species                                     |
| <b>Medium</b>  | Humans            | Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)                                                     | Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria           |
|                | Controlled waters | Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)                   | Leaching of contaminants from a site to a principal or secondary aquifer                                       |
|                | Property          | Significant damage to crops, buildings, structures and services                                                                                  | Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)             |
|                | Ecology           | A significant change in a particular ecosystem                                                                                                   | Death of a species within a designated nature reserve                                                          |

Table B: Classification of consequence (continued)

| Classification | Receptor          | Definition                                                                                                                                     | Examples                                                                                                                       |
|----------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>Mild</b>    | Humans            | Contamination present although unlikely to constitute a significant chronic health risk                                                        | Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria                    |
|                | Controlled waters | Pollution of non-water resources                                                                                                               | Pollution of non-classified groundwater                                                                                        |
|                | Property          | Damage to sensitive buildings/structures/services                                                                                              | Aggressive ground conditions leading to potential for long term degradation of buried concrete                                 |
|                | Ecology           | Damage to the environment                                                                                                                      | Localised damage to aquatic habitat causing temporary relocation of certain species                                            |
| <b>Minor</b>   | Humans            | Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)                            | The presence of contaminants at such concentrations that protective equipment is required during site works                    |
|                | Controlled waters | Potential minor release of contamination to local water features                                                                               | Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality |
|                | Property          | Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve | The loss of plants in a landscaping scheme. Discolouration of concrete                                                         |
|                | Ecology           | Short term, localised damage may occur; consequences are spatially and temporally limited                                                      | Short term or localised disruption to in situ flora or fauna; no lasting effects                                               |

Table C: Risk classification (comparison of consequence and probability)

|             |                 | Consequence (severity) |                   |                   |               |
|-------------|-----------------|------------------------|-------------------|-------------------|---------------|
|             |                 | Severe                 | Medium            | Mild              | Minor         |
| Probability | High likelihood | Very high risk         | High risk         | Moderate risk     | Low risk      |
|             | Likely          | High risk              | Moderate risk     | Moderate/low risk | Low risk      |
|             | Low likelihood  | Moderate risk          | Moderate/low risk | Low risk          | Very low risk |
|             | Unlikely        | Moderate/low risk      | Low risk          | Very low risk     | Very low risk |

Risk Key

| Very High                                                                                                                                          | High                                                                                                                          | Moderate                                                                                                                                                                                                                                                    | Moderate/Low                                                                                                                 | Low                                                                                                                                                                     | Very Low                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action | Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action | It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild | It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild | It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild | The presence of an identified hazard does not give rise to the potential to cause harm to a receptor |

## 3.5 Historical land use maps

Historical Ordnance Survey maps relating to the site and its surrounding area have been provided by Landmark.

Sussex

Published 1899

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Historical Aerial Photography

Published 1947

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.
