Subject: RE: Wave Sculpture/Totem

Hi Anita

Just to close a loop in case you needed absolute clarity on your previous queries to Karen (3 July) please see responses as follows:

- Is the sculpture is going to be illuminated? There is no mention of it. Bearing in mind where it is and what it supposed to be doing I would suggest this should be considered. It is not going to be illuminated currently; no signage is going onto the Totem and the main sign on the building is illuminated. However, allowances have been made to include ducting and there is power nearby should this be desired at a later stage – we understand a new application would need to be made.
- Is it intended that the plinth would be painted? It would be much better if it were painted to fit in with the grass verge in which it sits. A big grey slab in this setting would be prominent. Does the slab need to be so large? Planting will be incorporated around all sides of the totem base to provide screening, and which will be an extension of the existing planting on site using the same species e.g. grasses etc. The slab needs to be

the size it is, in order to provide enough space for the large fixings that the sculpture will attach to and accommodate the twisting of the sculpture bases.

- The plan of the structure is completely different to the photo image which doesn't seem a true representation. Can you provide clearly labelled scaled elevations for each side of the sculpture and maybe other photo montages from other directions further away from the base of the structure. We are in the process of collating additional visual information to help respond to this query (see earlier emails).

Regards
Rachel
