

Sketch plan of tree for maintenance 16 East Street,
Littlehampton – Ref LU/153/22/TC

View from rear house

NOTE- The gravel area on the path is a sewer manhole

View from Front of house

Note – the branches are interfering with the tiled frontage

View from the Flintstone Centre

Note – the tree to the right is a lime tree in the Flintstone centre and it is not part of this request.

View of the bund wall around the trunks

Note - After the last storms the surface area of the crown caused considerable movement resulting in the cracks on the bund wall. The Flint wall to the rear belongs to the Flintstone centre; The tree roots and movement must be under the foundations of the wall. They must also threaten the sewer which runs under the slabs to the front of the bund wall and potentially the foundations of the house the other side of the slabs
