

- NOTES:**
1. Final connections to the equipment will be made to satisfy terminated services provided within 1' of the equipment by the main contractor.
 2. **WATER:** Where blended, or min./max. temperature water supplies are required, or blending or mixing is required to cool hydraulic, mixing and temperature control valves should be supplied by the main contractor. Where treated water is called for, this indicates a requirement for conditioned drinking water, treated by a back-end method.
 3. Suitable substrate is to be provided to support wall hung equipment.
 4. Shims are competent in the engineering design, specification and installation of the equipment and customer systems that we quote. We are not however competent to design or specify the stability of existing structures in supporting the same and have not included for the provision of third party assessment of structural stability or secondary shims or supports.
 5. **Please note:** These drawings are provided to aid in the correct ordered provision of the room only. The amount shown is indicative only of the manufactured product. For fabrication detail please refer to manufacturing drawings.

- Damage Play**
-  = gallery trapped below ground
 -  = gallery trapped below ground with waste
 -  = waste conversion trapped above ground
 -  = waste conversion trapped below ground
 -  = waste down gallery appropriate position
 -  = floor grid with trapped outlet
- all conversions indicated adjacent to waste can to be as close to wall as is practicable.**
