Estimate and specification for the tree work at St Joseph s Convent Littlehampton

Convent Front and East Street

Our appraisal for the main extent of work needed for prudent management of the trees on the road side perimeters of the convent and 'Old House' is as follows:

The Holm oak to be crown reduced by 30 % with the Sycamore sapling (advanced) taken out.
The present crown is approximately 5 metres... to be reduced to 4 metres.

The live Chestnuts to be cut to original nodes. Those rotten to be removed.
These have new growth of approximately 2 metres which will be cut to pollard node.

The bays to be extensively trimmed.
The crowns are approximately 4 metres wide and 6 metres high. Trimming will reduce them to 3 metres wide and if possible the height reduced to 5 metres.

The Macrocapa to be trimmed.
This to be reduced from 3.5 metre width to 2.5 metres

The fence line tree growth across the street: Old House East Street and Franciscan Way

The Leylandii to be trimmed as far back as possible.
The present extent is an average of 3,5 metres. Trimming will bring this to 3 metres

The Oaks to undergo crown reduction.
These have open crowns of 4 metre diameter. They will be brought to 3 metres.

Other subjects not listed to be managed as required.
A Cotoneaster will be lightly pruned off the front wall of East street.

NB Particular attention to be given to the limbs overhanging the Convent fences to East Street for public safety.
