Scale 1:500 @ A1

These would provide the backbone of both the green/ blue infrastructure within the development and provide connectivity across the site between the Central Wetland in the south-west and the Water Meadows at the north. They would provide sustainable drainage features within the development. Soft landscaping will determine the character of these areas, with an emphasis on species that are tolerant of the unpredictable water conditions. Large trees will provide separation from the adjacent residential areas, while species rich meadows and wetland planting would deliver both a range of habitats and seasonal variation.
