Dear Neil,

8 SMALLCROFT CLOSE, LITTLEHAMPTON BN17 5QS

Further to our site meeting last Thursday to view and discuss the tree at the rear of the above address.

There are five stems of young sycamore up to 200mm diameter at ground level and about 6m maximum height. These trees are growing hard against the base of an ancient flint wall and, if left to develop unchecked, will eventually cause damage to this structure. I recommend that all stems are felled and the stumps treated with chemical killer.

Yours sincerely,

Stuart Power.
