

DESIGN AND ACCESS STATEMENT 43 NORFOLK ROAD
LITTLEHAMPTON

The property lies within a conservation area and the property was built circa 1830. Currently the windows to the rear of the property are in considerable disrepair and require replacement. I propose that they are replaced using UPVC white double glazed units which will enhance the insulation of the property. Many if the windows at the rear are not visible to the general public as there is no road there and also no footpath. They will increase the security of the premises and since many of the windows cannot be easily opened will increase the safety for those within.
