Hi Anita,

Thank you for your prompt response and update.

Please accept this email as confirmation that our client is happy to agree to an extension of time until 13th November and trusts, given the nature of the project, that all will still be done to try and pro-actively determine the application before this date should this prove possible.

In this regard, thank you also for requesting a quick turnaround from Liz Roger's. As previously explained, it is obviously a very important and pressing project for the area and minimising delays on the planning application is extremely important to the project team with the winter weeks fast approaching. If you were able to keep in close communication with Liz on Monday to continue to stress this that would be extremely helpful.

If you wouldn't mind also please providing me with another update early next week when you are in a position to, that would also be extremely helpful so that I can keep the project team fully aware of when the application is looking likely to be determined so that they can prepare ahead accordingly.

Thank you again for the update.

Best regards,

Peter.

Dear Peter,

I have not received Liz Roger's comments to date, generally a minimum of 14 days is a standard target response time. She only works Monday, Wednesday and Thursday. I have requested a quick turnaround, but doubt her response will be received on Monday. I therefore request your agreement to an extension of time of a further week, until 13-11-2017 to allow time for receipt of her comments and inclusion in the officer report.

Morning Anita,

I just wanted to please touch base with you today to see if the Council still require an extension of time to be agreed on the River Arun flood defence wall application or, as we are all hoping if at all possible, if you and Liz Rogers have spoken to see if it is possible for Liz to send you her consultation response earlier to enable the application to still be determined within its target determination deadline?

If you wouldn't mind please updating me as soon as you get a chance today that would be really appreciated so that I can inform my client.

Thank you for your time.

Bet regards,

Peter Kershaw.

Subject: RE: Our ref: LR4 Your ref: LU/291/17/PL Response to Liz Rogers comments 27 Sept 2017 15:51

Hi Anita,

Thank you for your email below.

I do not yet have approval from my client to agree to an extension of time, I am awaiting to hear back and I will let you know before the close of the week as soon as I do.

Our concern about any delays to the original target date are expressed in the email below from a member of the project team.

Dear Peter

As discussed, timing of the approvals is currently critical to the project schedule.

We are anticipating that works (should planning approval be provided on Monday the 6th of November) will continue upto Christmas. Any delays of the approvals will result in the works continuing over the Christmas break and will likely see construction equipment stored on site during the shutdown period.

We are obviously keen to not incur any delays to the works due to the extension of time required for the Christmas shut down and the associated costs.

It also should be noted that the intent of the wall is to provide flood protection for events up to a 1 in 300 year event. These type of events are more likely to occur during the winter time and therefore any delay to the works will leave the area with reduced flood protection, as is the current case.

Regards

Matt

The email from Tania White that is being consulted upon was sent to the Council 20 October 2017 at 17:22 so was submitted some time ago now to try and avoid any need for extensions of time. Given the overall concerns expressed above, I wonder if you might perhaps be able to discuss with the ecologist to see if she is able to expedite her response to avoid any unnecessary delays where at all possible? Naturally the scheme is very important for the area and any delay even a week will have a negative impact on the project's timeframe.

Once we hear back from you on whether anything can be done to avoid the need for the weeks extension of time we will then come back to you to confirm (if we still need to) if a weeks extension has been agreed.

Thank you for your time and continued attention to this issue. I do appreciate that you are somewhat tied by the time it takes for the ecologist to come back to you but would be grateful if you could speak to the ecologist.

Best regards,

Peter.

Dear Anita,

Thank you for your email.

Given the tight project timescales for this very important flood defence project with the winter months fast approaching, can I please check with you that there is no mechanism for speeding up the consultation response from the ecologist?

I hope you can appreciate our concern about an unexpected two week extension at this late stage, given the nature of this important project and the project timeframe.

Thank you for your time re-considering this issue.

Kind regards,

Peter.

Cc: Sykes, Oliver D

Subject: Our ref: L

Dear Juan,

The EA have received the comments of Liz Rogers (ecology) in respect to pollution, bats, birds, enhancements (vertipools and bat, bird boxes).

I seek to respond to Liz's identified query concerning the control of pollution,

I will then make a clarification of the type and location of enhancements and compensations that we have specified in respect of our duty of regard, given constraints of the site.

I would envisage that my clarifications will satisfy Liz's concerns, as I make reference below to documents submitted in support of planning that include measures specified as standard for the EA in works adjacent watercourses (and mudflats). However the EA would be pleased re revisit any final versions of documents to ensure that reference to pollution prevention controls are further specified, if any matter remains unclear.

1. A management plan to avoid runoff polluting the Bracklesham and intertidal mudflat

Measures for control of pollution and runoff are reviewed under the EAs standard procedures for design and methodology prior to internal "sign off". These must comply with EAs operational instructions. The methodology is reviewed by the EAs permitting team and any concerns addressed in supporting documents. Recommendations for conditions are made to the MMO where works will be below MHWS. The MMO then carry these forward in license conditions as lead authority at MHWS.

As such, in the case of the LR4 scheme for piling of 27m at Riverside Autos, pollution control measures have been reviewed during the design process, and methodologies agreed by the permitting team "FRAP" (with recommendations provided to the MMO for the licensing process to proceed in parallel with the LPAs evaluation).

Given the context that the existing defence is not removed (disturbance is minimised), and the new defence is installed in-front of it at the riverward side, measures specified and agreed by the EAs permitting team FRAP include the following:

From the Environmental Action Plan:

B21	To minimise any potential impacts of other contaminating materials on water quality during construction	Implement rigorous adherence to appropriate methods (Environment Agency Pollution Prevention Guidelines) for working over and adjacent to water, including specific appropriate checks and controls before pontoon work (higher risk) activities commence Works to be completed prior to March 2018	All Reaches Reach 4	Contractor	Pollution Prevention Guidelines No. 5, 21 and 23 GPP 5, PPG 6, GPP 8, PPG 14 and GPP 21	Ongoing Monitor risk around jet blasting of capping beam in reaches 1 and 2
B22	To minimise any contribution to flood risk during construction	Large stockpiles of materials/machinery to be outside the floodplain where possible. Register with the EA flood incident management team for notification of flood warnings Existing wall will be retained until all sheetpiles have been driven. Temporary flood bags will be utilised onsite for situations with anticipated flood levels above the existing wall height.	All Reaches Reach 4	Contractor	Flood Defence Consent Design Basis Report – Buildability Statement Planning Statement	Ongoing
B23	To prevent permanent impacts to drainage systems disturbed by the works	Any drainage system disturbed must be reinstated and replaced to at least their pre-construction standard	All Reaches Reach 4	Contractor	Flood Defence Consent	Ongoing
B27	To reduce the amount of waste soils	The generation and disposal of surplus or unsuitable soil materials is to be avoided as far as practicable by adoption of the guidance published in CL:AIRE 'The definition of waste: development industry code of practice' Disposal of waste materials	All Reaches Reach 4	Contractor	Site Waste Management Plan	Ongoing SWMP issued to VSL for Reaches 1 and 2 on the 22/10/13. SWMP for remaining

		unavoidably generated during construction is to be disposed of via licensed waste contractors to appropriate disposal sites in accordance with the Site Waste Management Plan. Any waste soils generated on site that are suitable are to be reused where possible. Waste generated on site is to be stored safely in designated areas and in appropriate containers in accordance with the Site Waste Management Plan					reaches issued in Sept 2014.
--	--	--	--	--	--	--	------------------------------

From the Design Basis Report

Further controls are specified in response to FRAPs inputs and are detailed at s5.4 - Contingency in the event of adverse weather and tide and at s5.8 and sw5.6 Site Waste Management Plan.

s5.6 includes measures such as:

During the driving of the sheet piles, it is expected that sediments will be stirred up by the vibratory action of the piling hammer. In addition to this, a crane and hammer with associated hydraulic hoses will be hanging over the water. Therefore, to prevent the release of potential foreign contaminants to the river water, a temporary floating bund will be provided around the site which will encompass the jack up barge. In addition, the hydraulic fluid for the works will utilise biodegradable hydraulic fluids.

From the Planning Statement s9.1

As works are to be undertaken adjacent to/within a marine environment, works on site will be conducted in accordance with PPG5 - Pollution Prevention Guidelines for works and maintenance in or near water (EA 2007) to prevent potential negative impacts to HPI Intertidal Mudflats and Running Water - Brackish.

[PPG5 is superceded as documented in the EAP]

Recommendations of the FRAP team

A letter of comfort with recommendations is forwarded to the MMO from the FRAP team, for consideration within their license terms.

The following are included

- It must be ensured that any storage of materials and chemicals are stored in such a manner whereas they cannot enter a watercourse.
- Any chemicals must be used in accord with the manufacturers advice notes and be suitable for use in a marine environment
- The applicant must adhere to the guidelines set out in Pollution Prevention Guidelines (PPG2) [referred in the EAP as GPP 5, PPG 6, GPP 8, PPG 14 and GPP 21]
- Should any spills or pollution incidents occur during the works, the Agency's Incident Hotline 0800 80 70 60 must be contacted immediately.
- Piling impacts should be minimised to that which is reasonable practicable to minimise disturbance to migratory fish species passage.
- Disturbance to the tidal natural habitat and mudflats during the construction works should be kept to a minimum.
- Due to the close proximity of the principle underground aquifer, if contamination not previously identified is found to be present at the site then no further works should be undertaken until a remediation strategy has been identified, and approved by the local authority.

In respect of the ecological consultee's second query

2. Re bats and light pollution during construction phase

Following Keystone Ecology's bat inspection of the site and finding of negligible risk of an offence, the Environmental Action Plan details that light pollution of potential flyways at the river will be controlled as follows. Bearing in mind that works are undertaken during winter, when bats are flying minimally, and that working hours extend only to 18:00, the following is considered to be sufficient and precautionary.

B13	Disturbance to bats	<i>If emergency works are to be carried out outside of normal working hours, ensure any lighting that is used is angled away from the river corridor</i>	~~Reaches 6 & 6R~~ Reach 4	Contractor	~~Although this item relates to Reaches 6 and 6R only,~~ best practice for working around waterways		Completion
-----	----------------------------	--	--	------------	--	--	------------

3. Regarding enhancement and compensation

The EA are in discussion with the supplier regarding supply of three Compton pools (a reduced dimension than vertipools). We still need to verify that fixings accord to the recess dimension of the piling sheets, however, we will select an equivalent product if Compton pool fixings are incompatible.

Re bird and bat boxes, we are aiming to install within more suitable and secure habitat to the north (this is *ex situ* to the site in proximity to saltmarsh).

Thank you for your time in considering this information with respect to the queries made and for passing this information to Liz and Chichester.

Please do not hesitate to call if there is any matter to clarify.
