

T1 IS A LARGE TREE WITH SPREADING CROWN FORMED UPON A SHORT BOLE. RECENT INSPECTION REVEALED A LARGE CAVITY AT THE STEM BASE, WITH A CORRESPONDING LOSS OF STRUCTURAL INTEGRITY AND ELEVATED RISK OF CATASTROPHIC FAILURE.

PRUNING WORK AS DESCRIBED WILL GREATLY REDUCE THE LOAD-BEARING ON THE STEM DURING HIGH WINDS AND SECURE THE TREES PLACE IN THE LOCAL LANDSCAPE – HOPEFULLY FOR MANY MORE YEARS.

BOTH T1 AND T2 ARE CLOSE TO RESIDENTIAL DWELLINGS AND PUBLIC HIGHWAY.
