Dear Mr Shepherd

Re: The Poplars, Rustington, Littlehampton

Introduction

Further to your recent instructions and our meeting on site a tree inspection was carried out on the 6 November 2008. This inspection was limited to the specific trees requested and in accordance with your instructions on site.

Objectives and Scope of Report

The report concerns the health/condition and safety status of the specific trees inspected. These trees includes the row of 18 Corsican Pines running eastwards from Watersmead Drive and on the boundary of the Worthing Road. In addition the Marcocarpa with the centre of the Green to the west of Watersmead Drive was also inspected. No other trees on site or adjacent to the subject trees were inspected.

The trees were assessed with a view to prescribing future management i.e. necessary arboricultural works and/or further investigation if required.

These works are to ensure the health and safety and structural stability of the trees, and in response to any structural defects or potential weaknesses.

This is not a detailed dimensional report and tree measurements and dimensions are approximate.

The trees were not climbed and test boring equipment or other mechanical devices to establish the trees structural integrity have not been used. The inspection has therefore been limited to a Visual Tree Assessment. More detailed investigation can be supplied if required.

Yours sincerely

Honey Tree Specialists
