OCCUPATION SITE (Occupation debris, Early Iron Age to Roman - 800 BC to 409 AD)

Evidence DOCUMENTARY EVIDENCE

SETTLEMENT (Early Iron Age to Roman - 800 BC to 409 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

An IA-RB settlement site was excavated in advance of development W. of Wick Farm, Wick. The features of the site fall into three groups, each representing a further phase in the development of the farmstead. Phase 1 comprises a hut, a gully (gully A on plan), postholes and 6 pits (1-6 on plan). The hut is triangular with sides c.4m long and the floor is 0.1-0.2m below ground level. The finds from the hut, an iron bill-hook, Iron Age 'A' pottery, a bone comb, a bone needle or spearhead and baked clay objects, suggest to the excavator that the hut was a working rather than a dwelling place. Of the 6 pits, Pit 1 contained carbonised grains. Pits 1, 3, 5, and 6 yielded quernstones and Iron Age sherds. Phase 2 comprised a rectangular ditched enclosure of 1 acre with an early inner ditch and a recut version of this (outer). The inner ditch averages 1.3m in depth and 2.6m in width with no entrances seen. Finds of pottery etc from the earlier ditch indicate a C2BC date, and the later ditch revealed occupation from about 20AD to C2ad or later. Phase 3 has a later field system (ditches B, C and D on plan). Finds from the ditches included a broken bronze brooch of Collingwood Type A1 and sherds of New Forest ware. The finds were deposited in Littlehampton Museum.{1} There is no trace of the site, which is now occupied by houses and gardens. The excavator is deceased.{2} The finds are still in the museum, some on display.{3} Also see {4}. Activity Reference - 1 = WS221

MWS3108	Climping Shipyard	Monument

Monument Types and Dates

INDUSTRIAL BUILDING (Post Medieval - 1800 AD to 1899 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Climping Shipyard - boatbuilding and repair yard of Hillyard and Osborne, where in the last century vessels of up to 600 tons were built. It was laid out in 1839, and the two-storeyed building with half-hipped roof housed the steam sawmill. The machinery for a ropewalk was located in the building at the NW. corner.{1}

INDUSTRIAL BUILDING (Post Medieval to Modern - 1900 AD to 1999 AD)

Evidence EXTANT BUILDING

Description and Sources

Description

Four of the 1918 hangars of Rustington US air station (TQ057-024-A - now developed, only the tall water tower and converted guard room and officer's mess survive) were acquired by Osbornes and re-erected, c.1922, side by side on the banks of the Arun at Arun Wharf, River Road, Littlehampton. They are now occupied as warehouses by Ockendens Ltd., builder's merchants. {1}

MWS3461	Roman cremation burial - Littlehampton	Monument

Monument Types and Dates

CREMATION (Roman - 43 AD to 409 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

A Roman vase was found about 18ins below the ground during building operations in 1901 in a field on the NE. outskirts of Littlehampton. A broken rough clay platter and remains of charcoal and bones were found with it. It is in Littlehampton Museum.{1} This burial group was in the foundations of Nos 2/4 Kent Road. Only the vase (actually a New Forest wheel-decorated flagon) was retained and was on display in the Museum. {2} The wheel may be a ritual symbol.{3} Found by workmen excavating for the foundations of some new villas in the Jay fields, and near the top of Arundel Road, Littlehampton, on December 16. Two other specimens (urns) were found at the same time, but were unfortunately broken.{4} The New Forest Ware flagon is no longer in the Littlehampton Museum, and may have been disposed of.{5}

Description and Sources

Description

In 1990 at OS Grid ref TQ 0170 0322 an extensive spread of occupation with a number of pits and postholes were observed. Limited excavation in one of these produced pottery of Cunliffes Ceasers camp, Park Brow tradition, suggesting the existence here of an Early Iron Age settlement, c. 600-800 BC. A number of flint flakes and a quantity of calcinated flint was recovered from this site. Although some truncation had occurred during topsoil stripping this site is to be preserved beneath the embankment carrying the road to the approaches to the new railway bridge. {1}

TRACKWAY (Medieval - 1066 AD? to 1539 AD?)

Evidence FIND

Description and Sources

Description

During the watching brief for the Littlehampton By-pass, at OS Grid ref TQ 0194 0333 a flint feature was observed to run diagonally across the road in a N-S direction. Later work sectioned this and revealed it to be 2 or 3 layers of flint, 4.6m wide and 0.45m deep. The 2 visible layers were separated by up to 0.1m of earth buildup. Fragments of brick were found in both layers. This feature is almost certainly a trackway of medieval/ postmedieval date. An estate map of Wick from 1759 (now in Littlehampton Museum) shows one of the farmtracks occupying this position. The track seems to have provided an access route to Courtwick Farm prior to the utilisation of Courtwick Lane. {1} {2}

FEATURE (Late Iron Age to Roman - 0 AD to 199 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

During the building of the Littlehampton By-pass at OS Grid ref TQ 0220 0335 A feature(s) of Roman date were destroyed during the digging of a cutting. This is most likely to have been a rubbish pit as no sign of the feature was seen in the roadside section. Pottery of 1-2 century date was recovered. Also in this area further pottery of Early Iron Age type was recovered. It is possible that this came from another series of features. {1}

MWS4531	Land at Courtwick Lane, Littlehampton - Evaluation	Monument

An archaeological evaluation was carried out on Land adjacent to Courtwick Lane, Littlehampton. No archaeological features were identified. However, high quantities of struck flintwork were recovered, with some showing evidence of re-touching.

Monument Types and Dates

FINDSPOT (In Use, (between) Prehistoric - 500000 BC to 42 AD)

Evidence	FIND
Evidence	Excavation/Evaluation

Description and Sources

Description

An archaeological evaluation on land adjacent to Courtwick Lane, Littlehampton, centred at TQ 0210 0380, prior to a proposed residential development of the site. 15 trenches and 10 test pits were dug positioned across the site: 15-17th century pottery sherds were recovered from six of the test pits, relating to manuring activity. The test pits revealed relatively high quantities of struck flintwork many of which display evidence of retouching. The density of the material and its unrolled condition suggest that prehistoric activity areas are located within the immediate vicinity. The absence of any archaeological features is surprising given the quantity of worked flint. The finds are all from topsoil and therefore unstratified. {1}

OCCUPATION SITE (Occupation debris, Roman - 43 AD to 409 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

When Belloc Road, Littlehampton, was built in 1951 two L-shaped ditches some 3ft in depth were excavated at TQ01980297 and TQ02170305 (A & B), and from the area between them came a quantity of C3 and C4 pottery. In the immediate vicinity three corn drying ovens were recognised (CDE). Each comprised a depression 18ins in depth, 6ft 6ins in length and 3ft in width, with a stokehole at one end. The clay floors were heavily burnt and on one a few grains of wheat were found. The wheat was analysed. Plans of the excavations are held in Worthing Museum. MS notes are in Littlehampton Museum. {1}{2} MS notes on the site were held by the, now deceased, author of an unpublished MS. {3}{4} Finds in Littlehampton Museum were re-boxed in 1976 (see lists on file). The site is referred to in the minutes of the Sussex Archaeol Soc Research Committee as Whickham Estate, Belloc Road and West Wick. {5}{6} Additional reference {7}.

Evidence FIND

Description and Sources

Description

Bronze Age pottery from the Wickbourne Estate, Littlehampton, in Littlehampton Museum. (No information on date or circumstances of finding).{1} Two Middle Bronze Age vessels were found when the Wick Estate was being developed in 1949-52. One bucket urn with slashed cordon, and a collared urn also with slashed cordon. The exact findspot is not known. {2} It was found immediately N. of the Iron Age enclosure (see 2171) during building operations in Wick Farm Road. {3} Only the bucket urn is now extant in Littlehampton Museum.{4} In 1990 it was recorded as still extant in the Museum, it seems instead to be a variety of bucket urn.{5} Also see {6} {7}.

INDUSTRIAL BUILDING (Post Medieval - 1800 AD to 1899 AD)

Evidence EXTANT BUILDING

Description and Sources

Description

River Road, Littlehampton: between the swing bridge and MacWester marine are several small workshops and stores built between 1800 and 1843. The S. half of the large block is the earliest, with a stone "T. Isenmonger 1800", followed by the two stores to its S., and then by the adjacent building on the N. All these are two-storeyed, in flint and brick under tiled roofs; from the bridge the large windows of the last are evident. Finally, there is the cement-rendered, single storeyed, building bearing a stone "M. Ockenden 1843". N. of the bridge is the former railway wharf, mostly built by the LBSCR in 1863; the only remaining building is the former custom house of 1864-5. {1}

Bronze Age Circular Ditch and Postholes.

Monument Types and Dates

DITCH (Bronze Age - 2350 BC to 701 BC)

POST HOLE (Bronze Age - 2350 BC to 701 BC)

Description and Sources

Description

The earliest phase of activity on the site dated to the Bronze Age with one semi-circular ditch found near the centre of the site. Postholes were found in the termini on either side of an entrance way through this ditch which probably once held posts to mark or form a gateway. The ditch may have acted as an agricultural enclosure or boundary rather than have been related to a settlement as there was no settlement evidence in the vicinity. {1}

For previous work see {2} {3} {4}

The site is located within the Arunside Industrial Estate approximately 600 metres north-west of Littlehampton Railway Station, and 500 metres East of the River Arun. The excavation area was machine-stripped of topsoil and subsoil and the natural geological deposit was brownish-yellow silty sandy clay, with irregular bands of sand and gravel in a sand matrix. The archaeological features were cut into the top of this deposit. Dating evidence was sparse across the entire site, but the majority of ditches produced a small amount of pottery sherds and worked flints. The site revealed evidence of human activity from the Early Bronze Age to the Late Roman period, with some post-medieval intrusions in the form of rubble-filled pits, concrete structures and land-drainage systems. Out of 24 evaluation trenches only nine revealed any archaeological activity. The excavation work targeted the area with the highest concentration of features. The absence of evidence of domestic activity; the small quantity of finds and lack of any actual remains of dwellings indicate that this was not a habitation area. The frequency of ditches and low artefactual evidence is suggestive of an agricultural landscape with bound areas reflecting specific land plots.

Bronze Age (2100-750BC) - The first activity on the site was dated to the Early Bronze Age. The earliest datable feature recorded on the site was a semicircular ditch, 23 metres long, which curved from the north-west down to the south-east and back up to the north-east. There was a break in the ditch with termini on either side of a 0.90 metre gap, three quarters of the way along the length. The feature probably once extended beyond the surviving semicircle, but had been truncated by later ploughing and may originally have formed a curved boundary or possibly a circular enclosure. Both termini contained post-holes that appeared to be contemporary with the ditch. The posts that these once contained may have acted as markers at the entry point through the ditch, either supporting some form of gateway structure or as individual uprights. The fill of this ditch contained Early Bronze Age pottery sherds including a beaker sherd with cord-impressed decoration, Middle t Late Bronze Age pottery sherds and a flint end and side scraper. Two, possibly associated, small pits of unknown function were found within the enclosed area of the ditch. The ditch may have acted as an agricultural enclosure or boundary rather than have been related to a settlement as there was no settlement evidence in the vicinity. {5}

Iron Age Rectilinear Field System.

Monument Types and Dates

FIELD SYSTEM (In Use, (between) Iron Age - 800 BC to 42 AD)

Evidence	Excavation/Evaluation
----------	-----------------------

Description and Sources

Description

During the IA the site was developed into a rectilinear field system, surviving as parallel, narrow, fairly shallow ditches. These ditches appear to have been in use during the early Roman period. (1) (2) (3,4)

The site is located within the Arunside Industrial Estate approximately 600 metres north-west of Littlehampton Railway Station, and 500 metres East of the River Arun. The excavation area was machine-stripped of topsoil and subsoil and the natural geological deposit was brownish-yellow silty sandy clay, with irregular bands of sand and gravel in a sand matrix. The archaeological features were cut into the top of this deposit. Dating evidence was sparse across the entire site, but the majority of ditches produced a small amount of pottery sherds and worked flints. The site revealed evidence of human activity from the Early Bronze Age to the Late Roman period, with some post-medieval intrusions in the form of rubble-filled pits, concrete structures and land-drainage systems. Out of 24 evaluation trenches only nine revealed any archaeological activity. The excavation work targeted the area with the highest concentration of features. The absence of evidence of domestic activity; the small quantity of finds and lack of any actual remains of dwellings indicate that this was not a habitation area. The frequency of ditches and low artefactual evidence is suggestive of an agricultural landscape with bound areas reflecting specific land plots.

Late Iron Age to Early Roman (75BC - AD250) -Undiagnostic pottery tentatively dated to the Early Iron Age was recovered from two linear ditches, but no features could be specifically dated to this period. The next major phase on the site appears to have occurred during the Late Iron Age and Early Roman periods when the site was developed into a rectilinear field system that survived as parallel, narrow, shallow ditches. Three ditches were aligned north-west to south-east and five at right angle to them, aligned north-east to south-west. The main north-west to south-east ditch contained small and abraded pottery sherds of Late Iron Age to Early Romano-British date and a few earlier residual sherds. Late Iron Age pottery was also found in two of the north-east to south-west aligned ditches. A line of four post-holes ran parallel to the southern side of a more substantial ditch and probably formed part of a fence line. The site appears to have been agricultural land during the Late Iron Age to Early Roman period and may have well been associated with settlement evidence to the East, North and West of the site. {5}

Late Romano-British Field System.

Monument Types and Dates

FIELD SYSTEM (In Use, (between) Roman - 43 AD to 409 AD)

Evidence	Excavation/Evaluation
----------	-----------------------

Description and Sources

Description

In the Late Romano-British period, the general alignment of the Iron Age field system altered slightly aligned from a northwest to southeast and northeast to southwest alignment to a north-northwest to south-southeast alignment with three parallel ditches. The most easterly of the Roman ditches was particularly substantial in comparison to the other features and may have formed a boundary between the arable land to the west and the settlement at Wickbourne Estate to the east. No signs of domestic activity were found on the site. (1) (2) (3,4)

The site is located within the Arunside Industrial Estate approximately 600 metres north-west of Littlehampton Railway Station, and 500 metres East of the River Arun. The excavation area was machine-stripped of topsoil and subsoil and the natural geological deposit was brownish-yellow silty sandy clay, with irregular bands of sand and gravel in a sand matrix. The archaeological features were cut into the top of this deposit. Dating evidence was sparse across the entire site, but the majority of ditches produced a small amount of pottery sherds and worked flints. The site revealed evidence of human activity from the Early Bronze Age to the Late Roman period, with some post-medieval intrusions in the form of rubble-filled pits, concrete structures and land-drainage systems. Out of 24 evaluation trenches only nine revealed any archaeological activity. The excavation work targeted the area with the highest concentration of features. The absence of evidence of domestic activity; the small quantity of finds and lack of any actual remains of dwellings indicate that this was not a habitation area. The frequency of ditches and low artefactual evidence is suggestive of an agricultural landscape with bound areas reflecting specific land plots.

Late Romano British - In the Late Roman period the general alignment of the field system altered by approximately 20 degrees with three parallel ditches aligned north-north-west to south-south-east. No evidence of domestic or settlement activity was recovered. The most easterly of the Roman ditches was particularly substantial in comparison to the other features across the site and may have formed a boundary between the arable land to the west and settlement to the east. The depth and profile of the ditch varied along its length with apparent evidence of episodes of recutting indicating a prolonged period of use. Seven sherds of Late Roman Oxfordshire Red Colour-Coated and Alice Holt/Farnham grey ware pottery were recovered from the lower fill of this ditch as well as residual Late Bronze Age pottery and prehistoric worked flints. The arable land continued towards the River Arun to the West of the site. The proximity of the Romano-British ditches to the Late Iron Age and Bronze Age features suggests that there may have been a continuity of use of this area for agricultural purposes throughout these periods. {5}

MWS9428	Multi-Period Site, Land off Courtwick Lane, Littlehampton - Archaeological Evaluation	Monument

A multi-period site was identified through archaeological evaluation - features dating mainly from the Bronze Age, Late Iron Age and Roman periods were located, but several Saxon and Medieval features were also present. The majority of features and finds were found to the south-eastern part of the site, where there is certainly a Late Iron Age to Roman settlement.

Description and Sources

Description

An archaeological evaluation was undertaken on land off Courtwick Lane, Littlehampton prior to a housing development on the site. Of the 320 trenches excavated, 111 were seen to reveal certain or probable archaeological features, dating mainly from the Bronze Age, Late Iron Age and Roman periods, however several Saxon and Medieval features were also present. The majority of the features and finds came from an area in the south-eastern part of the site. Here a Late Iron Age to Roman settlement was identified, and probably a Bronze Age one also. A concentrations in the southern-western corner of the site was also noted, this was thought to be of Bronze Age in date, and along the northern edge a probably prehistoric concentration was also seen along with scattered features elsewhere.

Although no in-situ (or disturbed) Palaeolithic remains were seen burnt flint was identified in almost half of all the features seen during the evaluation and although undated the quantity found most likely suggests prehistoric activity, especially along the northern edge of the western field where a concentration of burnt flint was observed.

The most dominant phase, in terms of features and finds recovered, appears to be the Roman period with a concentration of features of this date in the eastern part of the site, and particularly in the south-eastern corner of the proposed development area. Despite there being a good amount of Roman material identified the idea of a town or villa complex was dismissed with the suggestion of a modest rural settlement being favoured. It was also suggested that the Roman settlement could have well been a successor to a previous Iron Age settlement recorded on the line of the Littlehampton bypass.

One of the evaluations more significant finds was the survival of a small quantity of middle Saxon pottery may which may be seen to indicate a possible settlement. Saxon material is rarely seen at all in evaluations; furthermore Saxon sites with the exception of cemeteries rely heavily on just a handful of finds from an entire site for dating. Overall the evaluation confirmed that the sites archaeological potential for the Bronze and Iron ages and Saxon period was that of moderate. The Roman period was seen to be moderate to high whilst the sites potential for the medieval period was seen to be low. As no evidence for the early prehistoric periods was found this too was seen to be low. {1}

A watching brief was carried out at Courtwick Lane, Littlehampton, during the excavation of a large number of new house footing trenches for a residential development. The watching brief was carried out in the western and northern area of the site, immediately to the west of the excavation area. The area covered amounted to around 12ha. The underlying geology consists of Aeolian Deposits.

The footings monitored were in general 0.9–1.1m deep and between 0.60m and 0.70m wide. It was therefore difficult to excavate and/or interpret some of the archaeology as so little of it was exposed. Archaeological features were observed in

HER Number MWS9428**Site Name** Multi-Period Site, Land off Courtwick Lane, Littlehampton -
Archaeological Evaluation

eleven areas out of the two hundred plots monitored. Fifteen features were recorded and out of those, eleven contained pottery, dated from the Bronze Age and the Iron Age. These included four Bronze Age pits, three Iron Age pits, two Iron Age ditches, one Bronze Age ditch and one Bronze Age Posthole. An undated ditch, pit and posthole were also revealed as well as a spread containing charcoal flecks and struck and fire cracked flint. The features were widely distributed across the site but evidently relate to landscape use and possibly settlement. None produced evidence of industrial processes or funerary activity. {2}

War Memorial {1}:

UKNIWM Ref: 16610

Type: Plaque

Inscription: 1914 - 1918/ IN GRATEFUL MEMORY/ OF/ (Names)/ WHO DIED FOR THEIR COUNTRY

Physical Description: UPRIGHT RECTANGULAR TABLET WITH SPLAYED EDGES SET WITHIN A BRICK FRAMED NICHE IN GARDEN WALL

Wars Commemorated: First World War (1914-1918)

Ceremony: Not known

Craftsmen: Not known

Notes: Previous Location: Duke and Ockenden Ltd. Terminus Road, Littlehampton, West Sussex – Firm closed and premises were demolished. The memorial is now in the rear wall of the beer garden of the Steam Packet Public House.

2010: Apparently during building work the rear wall has been knocked. The memorial has come partly away from the wall, and one of the bricks has become dislodged.

2008: The Steam Packet Public House has now closed and the freehold is up for sale.

Description and Sources

Description

Littlehampton Signal Box was built in 1886 replacing an earlier 1863 Saxby and Farmer signal box. It is an example of the London Brighton & South Coast Railway's (LB&SCR) own signal box design Type 2 which was produced from 1880 onwards. These resembled the Saxby & Farmer Type 5, but without top-lights above the operating room sash windows, and had a large and ornate iron ventilator on the roof taking the form of a finial and some examples had valancing along the eaves, similar to that on a station platform canopy. The Type 2a was in use between 1880 and 1887, Type 2 b between 1888 and 1893 and Type 2c after 1893. Although these boxes were once common there are now only a handful of survivors still operational. Littlehampton Signal Box is a three bay brick signal box which retains its original horizontal sliding sash windows and it is the only remaining London Brighton & South Coast Railway signal box with eaves valancing. Valancing was rare on signal boxes in this country and the only other company to make much use of valancing was the London & South Western Railway. Littlehampton Signal Box remains substantially intact. The locking room windows have been blocked, which is not uncommon, and a later lean-to brick extension has been added to the rear. A small fairly unobtrusive toilet extension has been built on the left side of the steps and the steps have been boarded in, but the original wooden balustrading survives beneath. The operating room retains a LB&SCR Bosham Pattern Lever Frame of 1901 with 44 levers, an emergency bell signal and a track indicator. The locking room retains a locking frame with bars and locking trays. {1}

Description and Sources

Description

Farmstead on the North side of Gloucester Road, Littlehampton, has been identified as a Historic Farmstead through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.

Farmstead on the North side of Gloucester Road is a 19th century regular courtyard farmstead with a detached farmhouse set away from the yard. It is within a village location and has suffered significant loss (more than 50% alteration). Large modern sheds are on the site of the historic farmstead and may have destroyed or obscure historic buildings. It is a regular courtyard with a T-Plan regular courtyard on one side of the yard and an L-Plan regular courtyard range on the other. {1} {2}

MWS11449	Wickbourne Swan Public House, Clun Road, Littlehampton, West Sussex, Archaeological Recording Action	Monument

An archaeological recording action was undertaken at the site of Wickbourne Swan Public House, Littlehampton. During the recording action a small number of ditches and post holes were recorded. An assemblage of late Bronze Age pottery, struck flint which included a broken flaked axe was recovered. A single sherd of late Iron Age pottery was also recovered during the recording action. The report concluded that the recording action had successfully recorded those archaeological features which would have been most affected by the re-development of the site. The report also stated that whilst few finds were recovered from the features themselves, flint work and Bronze Age pottery was found in the layer immediately above the natural brickearth. This layer probably represented a mix of natural subsoil and the upper fills of the archaeological features. Unfortunately the features could not be clearly defined into this layer had been removed and although it is possible to speculate that certain finds came from particular features, the possibility of finds being moved through ploughing cannot be ruled out.

Description and Sources

Description

An archaeological recording action was undertaken at the site of Wickbourne Swan Public House, Littlehampton. The recording action was taking place prior to the construction of 12 new dwellings.

As an approximate location of a suspected hollow way was known a narrow preparatory trench was excavated however the only find that was recovered was a 19th century glass bottle.

In total 3 areas were excavated. Within the first a layer of brown sandy silt was encountered, this contained a number of archaeological finds which consisted of 12 struck flints and a concentration of pottery sherds. A ditch was also exposed from which a small fragment of fired clay and 8 possible loom weights were recovered from its single fill. Within the close vicinity three struck flints and some burnt flint was also recovered. Within the same area an number of other archaeological features were also identified however none of these contained any other archaeological finds.

Within a second area a post hole was identified which yielded small sherds which could only be dated to the prehistoric period. Some burnt flint was also recovered from the post hole. Another post hole was also identified which also contained burnt flint. Again more archaeological features were exposed however these did not contain any artefacts.

The final area failed to produce anything of archaeological interest.

The report concluded that the recording action had successfully recorded those archaeological features which would have been most affected by the re-development of the site. The report also stated that whilst few finds were recovered from the features themselves, flint work and Bronze Age pottery was found in the layer immediately above the natural brickearth. This layer probably represented a mix of natural subsoil and the upper fills of the archaeological features. Unfortunately the features could not be clearly defined until this layer had been removed and although it is possible to speculate that certain finds came from particular features, the possibility of finds being moved through ploughing cannot be ruled out. {1}

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence	Survey
----------	--------

Description and Sources

Description

An archaeological watching brief was carried out during geotechnical investigations on the River Arun in Littlehampton. The site consisted of a level stretch of land along the eastern bank of the River Arun in Littlehampton. The superficial deposits were listed as Raised Marine Deposits - clay, silt, sand and gravel formed in shallow seas with mainly siliciclastic sediments deposited as mud, silt, sand and gravel.

Visits were made to the site to monitor the risings from several geotechnical boreholes and hand dug investigation pits at the top of borehole locations made in advance of bore holing. Five visits were made in total from September 2012 to October 2012. No archaeological finds, features or deposits were identified, only modern made ground and natural deposits. The results of the watching brief are consistent with those from other boreholes not monitored in the watching brief which imply that the area monitored consists of modern made ground to varying depth of between 0.75 and 4.50m below ground surface.{1}

New Barn, Littlehampton, has been identified as a Historic Outfarm dating to the 19th century.

Monument Types and Dates

OUTFARM (Built, (between) Post Medieval - 1800 AD to 1899 AD)

Evidence	Survey
Evidence	Cartographic Evidence
Evidence	DOCUMENTARY EVIDENCE
Evidence	EXTANT BUILDING

Description and Sources

Description

New Barn, Littlehampton, has been identified as a Historic Outfarm through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.

New Barn is a 19th century 4 sided L-Plan loose courtyard outfarm or field barn. It is in an isolated location and has suffered significant loss (more than 50% alteration). {1}

Description and Sources

Description

Site of Yard associated with Wick Farm, Littlehampton, has been identified as a Historic Farmstead through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.

Yard associated with Wick Farm was a 19th century 4 sided L-Plan loose courtyard farmstead with the presence of a second yard with one main yard evident. The farmhouse was detached and set away from the yard. It was in a village location but the farmstead has been totally demolished/lost. A large barn-like building may survive within a larger shed on the side. {1}
