Dear Sir/Madam.

I am writing you this letter regarding the installation of solar panels (farm). I deeply object this going ahead as the field that it is going on has been a landfill site and canisters are toxic. Also there has been no thought on residents at Old Mead Rd, constant traffic off huge lorries and the hours and days that they will be working.

Yours Faithfully.

MS Susan Ashby-Wyatt

Re: LU/385/14/PL

With regard to the above planning Application for a solar farm to include 13200 panels, transformers - security, fencing etc, I wish to object to this project.

①

We live in a road that is unadopted and the road is a dreadful state of repair already.

Anesco are proposing approx 90 HGV lorries plus the weight of materials travelling up and down our road, with no thought of the further damage to the road

which they are not prepared to put right

② The proposed site is a Landfill site which has been known to have containers and tanks containing harmful substances which are a potential health hazard.

③ This is an area which supports protected wildlife, including Ows (Barn Ows) and Otters and Bats both of which are protected.

④ Solar Panels are known to kill birds as they fly over, and also that amount of panels will reduce the areas which wildlife can feed and nest.

⑤ There is also the noise level, which will have an impact on animals and people alike.

③

⑥

They will be Pile driving to install the posts to put the Solar panels on. It's extremely possible that they will hit and burst the canisters in the landfill sites. This will in turn release the contents which can seep into the ground, and then further into the waterways. Also gases can escape into the atmosphere etc. Who knows what consequences to us and the environment.

So I think this whole project needs to be rethought, and resited away from Brookbarn Farm and in another area that is not a landfill site or one that has protected Wildlife Species.

Yours etc,

Susan Ashby-Wyatt
