Pier road Site layout

The Image below shows the offload zone for deliveries marked by blue square. The att site plan shows the drop zone with several materials storage areas, we will have a fork lift available on site to remove and place all pallets as they arrive into the marked storage zones. During deliveries a banksman in high vis will be responsible for placing the required cones and traffic signs marked in yellow and general traffic management during the offload. Due to the size of the road the delivery process will not block the passage of vehicles, there being no pavement at this time on this side of the street will mean that pedestrians will not be affected by the site or its deliveries. See schedule for expected delivery timetable deliveries are to be 6 or 8 wheel rigid trucks.
