

The Arch System

The Arch system offers infinite opportunities bringing an outdoor environment indoors.

This great advantage of this flexible design is in its versatility to offer an open-to-the-garden option for those hot summer days.

COMMERCIAL BUILDINGS

In all styles the crystal clear windows on both sides of the enclosure, open and slide up into the roof. Each window is 6'6" wide and 6'6" high and when open gives unimpeded, ground level access to the garden or deck. Windows can be locked securely in all three positions – open, ventilation and closed.

Most importantly

- Take control of the weather – wind, rain and cold.
- No cancellations due to bad weather- Income guaranteed!
- Daily timetable is guaranteed.
- There will be significant savings in running costs.

A well-proven example of this are the revenue benefits accruing to restaurants by being able to enclose their patios in inclement weather, because all the side panels, which are usually 2m wide and 2m high, slide open into the roof, access to garden or deck is immediate and unobstructed.

SAFETY

Safety and security is improved because the crystal clear Polycarbonate windows are 200 times stronger than glass to impact breakage. The architectural materials used are strong and rigid and time proven, each component meets and often exceeds British and EU specifications. We have approved certifications under new EU safety regulations.

The system offers infinite opportunities bringing an outdoor environment indoors. Clear span widths from 5m to 25m (16ft to 82ft) with unlimited length.

The enclosures offer new opportunities and increased profitability to commercial ventures by extending the season, increasing throughput and reducing costs.

AGENT STAMP

The logical Solution

* The patented designs are recognized as amongst the most innovative and technically up to date in the world.
* The product is factually better and more advanced than any other on the market; it offers more features and more flexibility of design.
* We offer a complete fixed price package: custom design, manufacture, construction and installation by our own engineers.
