Good Morning

With regards to your email below the glazing bar is 25mm wide and is surface mounted to the glazing using a mastic strip and rivets at the top and bottom of the bar.

The window itself will sit roughly 65mm from the roof batten so how far it will protrude above the roof line will be dependent on the thickness of the roofing material used.

The external colour of our conservation windows is RAL 9005.

If we can be of any further assistance please get in touch.

Regards

Daniel Holland

Subject: [EXT!] Technical information for Conservation window

Good Morning,

I am interested in 3 X CW-TCP-03-T and would like some additional information regarding the

- glazing bar (width, how attached to frame),
- the protrusion above the roof surface and
- RAL colour.

While I have found the data sheet (Keylite-Datasheet-Conservation-Roof-Windows) and a general drawing (Keylite CP-TRF-3) I could not find the above specific information.

Looking forward to hearing from you soon, Uwe
