

Mrs Calcutt

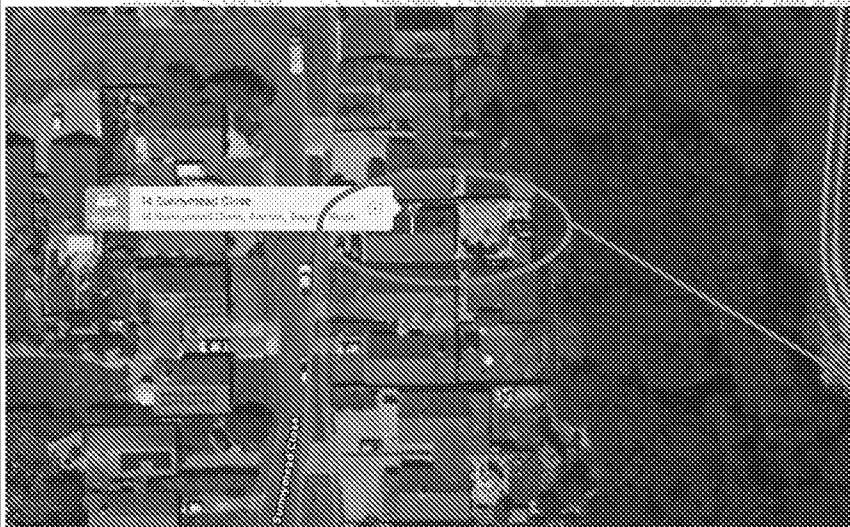

Dear Mrs Calcutt,

Following my visit to look at the trees at the back of your garden, I recommend the following...

There are two Sycamores outside your garden, these overhang your property on the East boundary. Each of these trees have a lower branch, these two branches grow out approximately 3m from the main stems.

In order to allow more light in to the garden these two branches need taking back to the main stems, this will leave the higher canopy's a westerly spread from the stem of 3 meters. The height of the trees after the work will remain at aprox 8 meters (the height will not change)

Location of the two
Sycamores.
