

08 View south west towards site from PRoW (YAP/146/3)

Location	PRoW (YAP/146/3)
Co-ordinates	SU 95490 02382
Elevation	-2m AOD
Distance	0.79 km
Bearing to Site	North East
Date of View	21st October 2021
Receptor Type	PRoW Users

Viewpoint Description

The north eastern boundary vegetation of the site is visible at distance across arable landscape. The boundary vegetation screens the interior of the site. Pylons are visible within the scene and the bridge of the relief road is prominent.

Viewpoint Location Plan

Description of View / Type of Effect	Sensitivity to Change	Magnitude of Change	Effects of Change
Construction: If discernible, the upper levels of activity associated with ecological enhancement only, would be visible in the immediate context of the relief road and bridge. This would represent only a marginal and temporary component of the scene.	High	Minor adverse	Minor adverse
Year 1: It is not anticipated that built form would be perceptible in summer months. If visible, it would likely be limited to the sections of the care home roof line, representing a small component of the scene and not the focus of it. During winter months, further aspects of the care home may be seen revealed through the intervening dense boundary vegetation, however, owing to the distance and the density of the vegetation, it would likely be difficult to discern.	High	Minor adverse	Minor adverse
Year 15: By year 15 supplementary boundary vegetation would have matured and the building materials on site would have weathered. If views of built form remain visible, the materials themselves would be better integrated into the wider scene.	High	Minor adverse	Minor adverse
