Subject: Planning Application M68/20/L Poultry Farm Yapton Road PO22 6DY objection

Dear Decision Makers

Planning Application M68/20/L Poultry Farm Yapton Road PO22 6DY objection

A not profit organisation of scientists, Climate Central, have studied the devastating effect that climate change will have on our West Sussex shores.

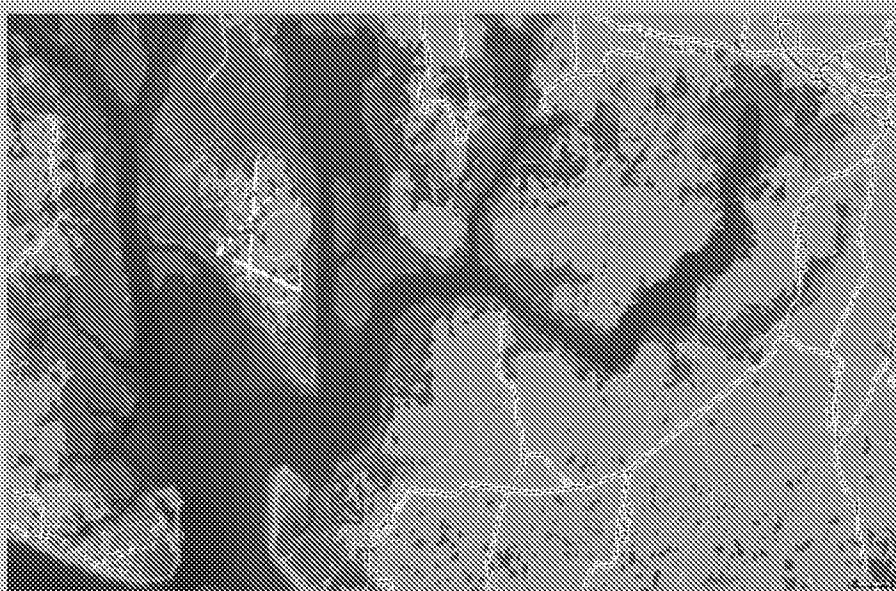

Take a look at the study for Bognor Regis. The results are shocking. The land earmarked for this development will be under water - not a caring solution for our vulnerable elderly population. Moreover, Arun Planning and West Sussex County Council should ditch all future building proposals on coastal flood plains.

Local Change?

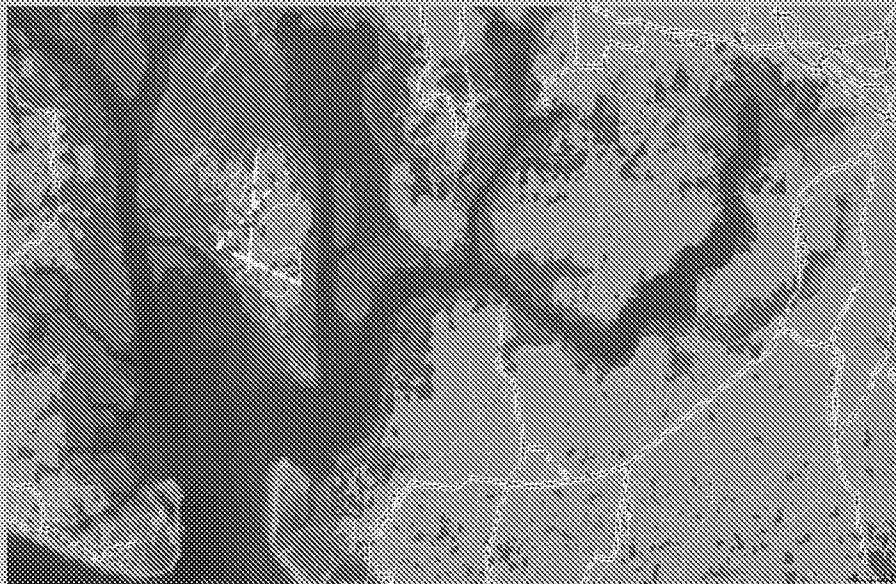

- New projections have been released showing the effect that rising sea levels could have on West Sussex's coast by the year 2100.
- Surging Seas has created an alternative world map to show the possible effects of melting ice caps and a rise in global temperatures.
- The project has been developed by Climate Central, a nonprofit science and news organisation which researches climate change and its effects.
- Climate Central has warned that sea level projections could double in some areas due to an unstable Antarctica, unless big cuts are made to climate pollution levels.

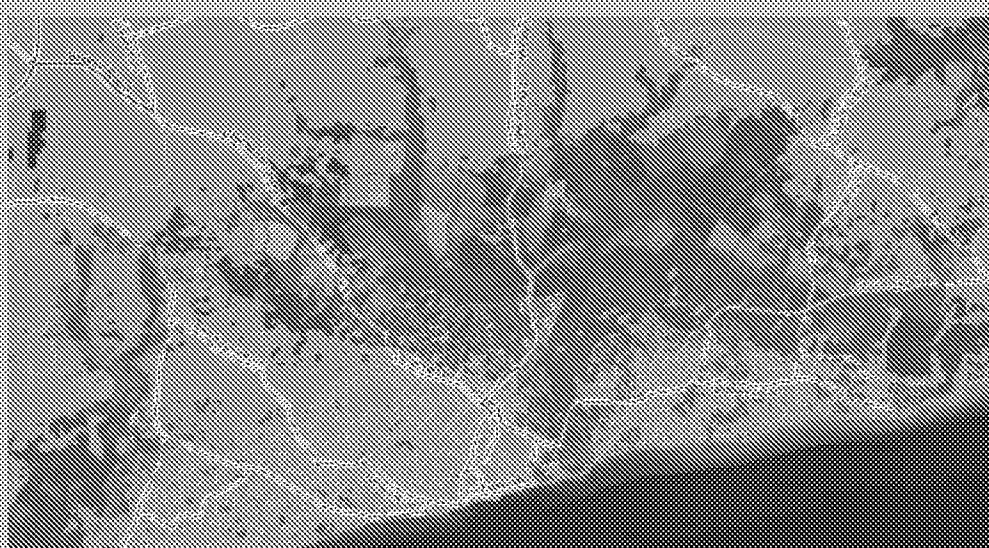

- The rise in sea levels would have a big impact on the Area of National Beauty in and around Chichester Harbour, with most of Thorney Island being lost to the sea along with large sections of Bosham.

- The rise in sea levels would have a big impact on the Area of National Beauty in and around Chichester Harbour, with most of Thorney Island being lost to the sea along with large sections of Bosham.

- Selsey and Pagham would be left underwater by a rise in sea levels, with the exception of a few areas at the very tip of the Manhood Pensinsula around Selsey

- While there would only be a few areas on the immediate coastline in Bognor affected by a rise in sea levels, there affects are much more pronounced inland in areas such as Flansham, Shripney and Colworth
