Description and Sources

Description

Roman pottery was found in the cliff at the end of the footpath from Middleton Church to the shore in 1931.{1}

It is in Littlehampton Museum.{2}

Roman potsherds found in 1931 in the cliff at the end of the footpath from Middleton Church to the shore. They are in Littlehampton Museum. By 1971, the coastline was fully developed and the sherds could not be located.{3}

A silver denarius dated to early AD68 was found in the vicinity in 1976. {4}

Description and Sources

Description

A Roman site was discovered at Bilsham corner in 1963 during extensive road works. There were traces of a ditch, flint walling, rubbish pits and C1-C3 pottery. Details were reported to Chichester Museum.{1}

A Romano-British site has been discovered at Bilsham Corner (Area) during extensive road works. There are traces of a ditch, flint walling, rubbish pits and 1st-3rd century pottery. The Romano-British discoveries were made in August 1963. An exploratory excavation revealed a probable Romano-British farm. The finds are in Chichester Museum (no acc no) and a report is pending.{2}

MWS2414	Middle Bronze Age pottery - Middleton on Sea	Find Spot
---------	--	-----------

Middle Bronze Age pottery sherds have been found north-east of Middleton on Sea.

Monument Types and Dates

FINDSPOT (Ceramic, Middle Bronze Age - 1600 BC to 1001 BC)

Evidence	FIND
----------	------

Description and Sources

Description

Middle Bronze Age pottery sherds have been found north-east of Middleton on Sea. The site is situated on a slight rise comparable to the rich Iron Age/Romano-British site at North Bersted. Scrub covers the southern third of the site; the remainder is under pasture. There is no visible sign of disturbance. Given the site's favourable position and close proximity to Middle Bronze Age material, it is likely that prehistoric and Romano-British occupation took place here. {1}

BUILDING (Building-unclassified, Roman - 43 AD to 409 AD)

Evidence DOCUMENTARY EVIDENCE

PIT (Roman - 43 AD to 409 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

The excavation at NGR 9700 0000 A2 revealed in excess of 164 archaeological features, mostly thought to be of Romano-British date (indicating intense activity during that period). Pits, postholes, ditches, and stakeholes made up the features, only a few formed a (roughly rectangular) pattern, the others could possibly form fencelines and/or small ancillary structures which left little trace in the archaeological record. The 'timber building' measured 7.5m x 3m, the area was cut by a large ditch running N-S (which was also cut by smaller gullies) and a possible shallow pond lay in the SE corner. {1}{2}

FARMSTEAD (Late Iron Age to Roman - 0 AD to 399 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Probable Romano-British farmstead excavated at Moraunt Drive (site OS map ref. SU 97016 00610) by South Eastern Archaeological Services in Oct-Nov 1992. The main occupation spanned the C1-C2, with a continuation, perhaps less intensely, into the C3 and C4. A ditch, pits, post-holes and many stake-holes were recorded. A rectangular post hole building c.7. 5m x 3m was abandoned before or during the C2. Finds include pottery, a quern fragment, cattle and sheep bones, and charred plant remains (crops including wheat, barley, pea and possibly oats). This may be part of a larger site extending westwards and southwards. Activity Reference - 3 = WS85

DITCH (Roman - 43 AD to 409 AD)

Description and Sources

Description

3 later Roman ditches were excavated within a 50 m trench (ahead of the cutting of the pipeline trench). A wide palaeochannel containing later Roman pottery in its upper fills was identified adjacent to the ditches. The watercourse is likely to have been a tributary of the Ryebank Rife and may have influenced the siting of the adjacent Roman site. Finds included much Roman pottery, a sherd of early Saxon (or possibly late Iron Age) pottery, a sherd from a middle Iron Age 'saucepan pot', bone fragments, a fragment of burnt stone (from an oven or hearth?), a third of a Roman rotary quern stone, a fragment of a keyed box flue tile, a fragment of 1st-4th century Roman floor tile and a fragment of amphora handle.

Fire cracked flint and worked flints, including flakes and cores were identified during a field walking exercise at Sheepwash Barn, Middleton-on-Sea.

Monument Types and Dates

FINDSPOT ((between) Early Mesolithic to Post Medieval - 10000 BC to 1900 AD)

Evidence	FIND
----------	------

Description and Sources

Description

Fire cracked flint and worked flints including flakes and cores were recovered from this field as well as some post medieval material. (1)

Sheepwash Barn field, Middleton on Sea, lies on brickearth and is situated about 600 metres south of Bilsham field (see MWS6958 and MWS6959). A fieldwalking exercise was carried out at the field in the Summer of 1999. The field was walked on a north-south grid at 20m intervals. The visibility aspect of the fields surface was poor as the field was ploughed during the period of the fieldwalking exercise. Fire-cracked flint and worked flints including flakes and core was identified. No prehistoric pottery was collected and only one sherd of Roman pottery was identified. The majority of the pottery/brick/tile was post-medieval in date. {2} {3}

Description and Sources

Description

Two Roman Features were exposed during the evaluation, as well as Roman Pottery. A Substantial Roman ditch probably belongs to the same field system examined at Shrubbs Drive (SMR 7343). A small fragment of Quernstone and two pieces of tegula might suggest occupation in the vicinity. {1} {2}

"Greenfields" is approximately 400 metres inland on the West Sussex coastal plain at a height of around 5 metres above Ordnance Datum. An initial evaluation at the site located a single undated pit filled with a dump of oyster shells, together with a Roman linear feature (ditch 2), which was thought to be a continuation of a pattern of Roman ditched fields discovered on the adjacent site of Nalgo Lodge. The excavation consisted of four small areas (A-D) positioned to relocate ditch 2 and to ascertain its dimensions, alignment and extent. This ditch was excavated in three further sections (3, 4 and 5) across Areas B and C but did not continue to Areas A or D. In area B it was 2.27 metres wide and 0.89 metres deep. Further north, in Area C, it was similar, at over 2 metres wide and 1.24 metres deep and at the extreme north of Area C, apparently beginning to curve to the north-east, which is confirmed by its absence from Area D. All three sections showed a stepped profile and three fills. The top fills of the ditch contained 2nd century Roman pottery, fired clay and burnt flint. Only one lower fill contained pottery, not noticeably different from that in the top fills. The various ditch fills also contained eight undiagnostic flint flakes. A small fragment of Mayen lava quernstone came from the spoil heap in Area C. Two fragments of Roman tegula were recovered from the spoil in Area A. {3}

Description and Sources**Description**

Some Medieval activity was exposed on the site. {1}

"Greenfields" is approximately 400 metres inland on the West Sussex coastal plain at a height of around 5 metres above Ordnance Datum. An initial evaluation at the site located a single undated pit filled with a dump of oyster shells, together with a Roman linear feature (ditch 2), which was thought to be a continuation of a pattern of Roman ditched fields discovered on the adjacent site of Nalgo Lodge. The excavation consisted of four small areas (A-D) positioned to relocate ditch 2 and to ascertain its dimensions, alignment and extent. Trench D contained a single shallow gully, 0.55 metres wide and 130 mm deep, following the same alignment as the much larger Roman ditch (see MWS7406). The gully contained a single undiagnostic flint flake, tiny scrap of Roman pottery, a small quantity of burnt flint, a sherd of Saxo-Norman pottery and a medieval sherd dating from AD 1250-1350; it is probable, therefore, that the gully is medieval. No continuation of this gully had been seen in the evaluation trench to the north. {2}

Evidence Excavation/Evaluation

LINEAR FEATURE (Laid Out, (between) Bronze Age - 2350 BC to 701 BC)

Evidence Excavation/Evaluation

Description and Sources

Description

Worked and burnt flint as well as a M-LBA feature suggests some limited activity in later prehistory. {1-4}

The excavated site is within the grounds of the former Nalگو Lodge. The site is bounded to the north, east and south by Elmer Road, Shrubbs Drive and Penn Close respectively and to the west by residential/commercial development. The positioning of the excavation trenches was based on the findings of the evaluation and watching brief. They were located outside the footprint of the former Nalگو Lodge building and largely within areas that were to be affected by the new development. Two linear features, in addition to a small assemblage of flint debitage, represent the total evidence of prehistoric activity at the site. A shallow gully aligned north-south at the north-east corner of the site contained an unabridged body sherd of Middle or Late Bronze Age date. The gully was truncated to the north by later activity and continued southwards beyond the limit of the trench. A faint shallow linear feature aligned east-west was also identified and is tenuously dated by a small quantity of burnt flint and slag. {5}

The GIS mapping indicates the approximate extent of the site.

Description and Sources

Description

A Romano-British Field system was exposed during the Evaluation and Excavation, as well as Roman finds. {1-4}

The excavated site is within the grounds of the former Nalgo Lodge. The site is bounded to the north, east and south by Elmer Road, Shrubbs Drive and Penn Close respectively and to the west by residential/commercial development. The positioning of the excavation trenches was based on the findings of the evaluation and watching brief. They were located outside the footprint of the former Nalgo Lodge building and largely within areas that were to be affected by the new development. Romano-British activity was dispersed across the site and was represented by six linear feature thought to represent part of a Romano-British ditched field system. A ditch aligned north-east/south-west was located at the north-west corner of Trench 2b. The fill contained a small assemblage of 3rd to 4th century pottery sherds. Three possibly early Romano-British pottery sherds were recovered from this feature where it was intersected by a medieval linear feature. A small post-hole cut the north-western edge of this feature. A short length of ditch with a rounded base was also located. The fill contained two small abraded sherds of 2nd to 3rd century pottery and a small assemblage of burnt and worked flint. A small ditch approximately the same alignment as the ditch in Trench 2b, but of different dimensions was identified in Trench 5. The fill of this feature contained a small assemblage of Rowlands Castle ware and abraded sherds in addition to a small fragment of briquetage. At the northern end of this feature a wider ditch ran approximately north-east/south-west, but their relationship could not be established. The fill of this feature contained four small and abraded Roman pottery sherds in addition to a small abraded sherd of Late Bronze Age/Early Iron Age pottery. Towards the south-east of the site a short length of ditch was found within Trench 4. Three small abraded sherds of Late Bronze Age/Early Iron Age pottery; an animal bone fragment, 27 worked flints and 1.8kg of burnt flint were also recovered. A continuation of this feature was detected within Trench E7 and a further small sherd of South Gaulish Samian was also recovered in addition to approximately 700g of burnt flint. {5}

Description and Sources

Description

A Medieval Field system, smithy and building were exposed during the evaluation and excavation. (1-4)

The excavated site is within the grounds of the former Nalgo Lodge. The site is bounded to the north, east and south by Elmer Road, Shrubbs Drive and Penn Close respectively and to the west by residential/commercial development. The positioning of the excavation trenches was based on the findings of the evaluation and watching brief. They were located outside the footprint of the former Nalgo Lodge building and largely within areas that were to be affected by the new development. Three intercutting medieval pits were located during the evaluation within Trench E1, containing pottery dated to AD 1275-1375. A partially exposed probable linear feature was located in Trench 1 containing a small pottery assemblage including an abraded residual Late Bronze Age/Early Iron Age Sherd and a small 12th to 13th century rim sherd. Four medieval features were located within Trench 2a. A linear feature aligned north-west/south-east contained one small sherd of 13th to 14th century pottery within its fill. The terminal end of this feature cut Ditch 45 in Trench 2b. Two pits lay immediately adjacent to each other containing burnt clay, slag and pottery within the date ranges of AD1275-1375 and AD1200-1300. A moderate amount of oyster shells was collected from one of the pits. A narrow, linear gully ran in a south-westerly direction from a roughly oval shaped pit. It was not possible to establish their relationship but the pottery from both features falls within a date range of AD1250-1400. A small amount of bone, slag, burnt flint, tile, shell, and copper alloy was identified from their fills. At the eastern end of Trench 2b two further medieval features were located. The fill of a shallow, roughly circular scoop contained a single potsherd dated to AD 1200-1400 in addition to a small quantity of tile, bone and burnt clay. An undated, but stratigraphically later gully extended from the southern end of this feature. This gully cut across another gully aligned east-west. The fill of this feature contained pottery dated to AD 1250-1425, large quantities of tile, worked flint, foreign stone, moderate quantities of bone, shell burnt flint and copper alloy, and a few fragments of iron, slag and burnt clay. Sealing these features at the easternmost stretch (around 8 metres) of this trench is a destruction layer which comprised mainly broken tile, foreign stone and flint. Pottery sherds dated AD 1350-1475, in addition to shell, copper alloy and iron were also collected. A single fairly steep-sided ditch aligned east/west was found within Trench E4 containing a small assemblage of pottery dating to AD 1250-1375. At the northern end of Trench E5 an oval spread of tightly packed flints around 80mm thick was located containing a single sherd of pottery dated to AD1200-1400. Within Trench 5 a large steep-sided U-shaped ditch was located. This feature curved from an approximate north/south alignment around to a westerly alignment at its northern end. An assemblage of pottery dated to AD 1200-1350 was recovered from its fill. A large curving boundary/drainage ditch and re-cut dominated Trenches 3 and 4. The ditch measured over 21 metres long, up to 4.5 metres wide and up to 1.3 metres deep in places. A chalk-filled French drain was found to run along the centre of the north-south section of this feature; it caused this feature to flood continually as water from the surrounding area was channelled through this conduit. A small quantity of 13th to 14th century pottery was recovered from its lower fill. A pit lay immediately to the north of this ditch on the inside corner and contained a small quantity of 14th century pottery. This was cut by a field drain which contained residual 13th to 14th century pottery. A short length of ditch was found to run southwards from the corner of ditches 20, 24 and 32. Pottery recovered from its fill included abraded sherds of both Roman and medieval date (AD? 1200-1400). Medieval pottery suggests late 13th-14th century activity with indication of activity into the early 15th century. A single, poorly preserved Anglo-Saxon grave, carbon dated to cal. AD 680-890, with an east-west orientation, was also found. {5}

The GIS mapping indicates the approximate extent of the site.

Description and Sources

Description

Built 1849 following loss of the original church to the sea; tiny lancet chapel with free standing bellcote. (1) Detailed history of the original church by Georgina Male. (2)

The new church of galletted flint by J Elliott shows his idiosyncratic use of gothic. He concentrated display on the west end, where the stone belfry projects from the west gable on free-standing shafts with foliage capitals. Between these is a two-light window and the west doorway (now only visible inside) is a remarkably accurate version of one of c1200. Unusually for the late 1840s, the church lacked a chancel and the side-walls are plain, with lancets; the east end was differentiated only by a triplet. H M Pett added the west gallery, at least in its present form, in 1927-28. N F Cachemaille-Day, produced designs for an extension in 1932-33 with his partner F Lander, but nothing was done until 1949, when the lower part of the west end was hidden by a flat-roofed vestry and entrance. The lack of a chancel was remedied in 1977-78, when G Claridge added a flattened east apse of brick and flint. There was no attempt to match the rest stylistically and he also replaced most fittings. This was in turn effectively superseded in 2005-07 by a more elaborate project, which entailed removing the former church hall to the south and also the south wall of the nave. A new extension to the church, which contains the main entrance and a much larger hall, was built in their place. At the same time, the existing church was completely re-planned, with the altar placed against the north nave wall, to allow for maximum visibility from the new parts. Externally these are faced in white render with brick dressings and there is, again, no attempt to harmonise with the older flint work. The new structure is surmounted by a low-pitched roof. {3}

Evidence EXCAVATED FEATURE

DITCH (Iron Age - 800 BC to 42 AD)

Evidence EXCAVATED FEATURE

Description and Sources

Description

An archaeological evaluation was undertaken on land adjacent to Flansham Lane, Felpham, Bognor Regis. During the evaluation a total of 19 trenches were excavated within which 4 ditches were identified. Within one of the ditches a single sherd of Iron Age pottery was recovered however this was the only find discovered during the whole archaeological investigation. Despite only one of the ditches being dated through the single sherd recovered it was thought that all the features were contemporary due to the similarities of the fills within the features however this could not be confirmed. The results of the evaluation would suggest that the site had a moderate to high potential for further archaeology particularly for the prehistoric period. {1}

Description and Sources

Description

A watching brief was carried at Comet Corner, Middleton-on-Sea during the geotechnical pitting in preparation for the proposed realignment of the road junction. The underlying geology comprises Upper Chalk overlain by superficial deposits of undifferentiated River Terrace Deposits of sand, silt and clay. The site lies at approximately 4m aOD.

A single trial pit was monitored. The pit measured 1.4m by 0.70m and was excavated to a depth of 0.56m. No archaeological finds or features were identified and the natural geology was not observed. {1}

A watching brief was carried out at Comet Corner, Middleton-on-Sea, during road improvement works. The site is located at the junction of Worms Lane and Yapton Road. The site is relatively flat and lies at a height of around 4m aOD. The underlying geology consists of Aeolian deposits.

Two areas were observed during the watching brief. Area A - excavation of a new section of roadside drainage ditch on the west side of the B2132, to the south of the A259 and Area B - widening of the eastern splay of the B2132 on the south side of the A259.

A small amount of finds (five pottery sherds, two struck flints and six burnt flints) were recovered from Area A. Subsequent investigation by hand established that these finds came from patches of the subsoil layer which had been disturbed by rooting. No archaeological features were observed in this area. No archaeological features or finds were identified from Area B which had been heavily disturbed in the past by previous roadworks and the excavation of service trenches. {2}

Description and Sources

Description

Sheepwash Barn, Middleton-on-Sea, has been identified as a Historic Outfarm through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.

Sheepwash Barn is a 19th century 3 sided loose courtyard outfarm or field barn. It is in an isolated location and has suffered significant loss (more than 50% alteration). {1}

MWS14569	Felpham to Climping Cycle Path (A259) - Watching Brief	Negative Evidence

A watching brief was carried out during the construction of a new cycle path immediately north of the A259. However, due to the relatively shallow ground reduction and the presence of numerous services no archaeological finds or features were recorded.

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence	Survey
----------	--------

Description and Sources

Description

A watching brief was carried out during the construction of a new cycle path immediately north of the A259. The site is located immediately north of the stretch of the A259 road between Felpham and Climping. Two areas (originally three) along the length of the new cycle path were identified that had the potential for archaeological remains to be destroyed or damaged during groundworks. The underlying geology consists of Aeolian Deposits.

Archaeological Recording Area 2 was a narrow strip, measuring up to 3m wide and 246m in length. It was stripped of overburden down to the required level for the new cycle path. No archaeological finds or features were identified and it was clear that the area had been significantly disturbed in the past due to the presence of numerous service trenches, most of which ran parallel to the road. In those areas not affected by service runs, the natural Brickearth geology was not exposed due to the relatively shallow depth of the ground reduction.

Archaeological Recording Area 3 was a narrow strip, measuring 234m in length and was up to 3m wide. No archaeological finds or features were recorded, although several service trenches were identified within the stripped area. In the areas not affected by the service runs, the natural Brickearth geology was not exposed due to the relatively shallow depth of ground reduction.

Overall, due to the relatively shallow ground reduction and the presence of numerous services no archaeological finds or features were recorded during the watching brief. {1}

Arun 017

Name: Bronze Age, Iron Age and Roman Settlement Activity, Middleton-on-Sea

Grade: Red **Date Assigned:** 18/09/2013 **Amended:** 25/08/2020 **Revoked:**

Legal Description

Late Bronze Age and Iron Age pottery were recovered from the excavation of a Romano-British settlement, or farmstead. The main occupation spanned the C1-C2, with a continuation, perhaps less intensely, into the C3 and C4. A ditch, pits, post-holes and many stake-holes were recorded. A rectangular post hole building c.7.5m x 3m was abandoned before or during the C2. Finds include pottery, a quern fragment, cattle and sheep bones, and charred plant remains (crops including wheat, barley, pea and possibly oats). This may be part of a larger site extending westwards and southwards.

Curatorial Notes

HER Search Required: Very sensitive area for Archaeology; Thresholds for RED Area apply.

Arun 016		

Name: Roman Settlement, Middleton-on-Sea

Grade: Red **Date Assigned:** 18/09/2013 **Amended:** 03/09/2020 **Revoked:**

Legal Description

A number of archaeological features, mostly thought to be of Romano-British date consisting of Pits, postholes, ditches, and stakeholes with a number forming a (roughly rectangular) pattern, the others could possibly form fencelines and/or small ancillary structures. The 'timber building' measured 7.5m x 3m, the area was cut by a large ditch running N-S (which was also cut by smaller gullies) and a possible shallow pond lay in the SE corner.

Curatorial Notes

Administrative Areas

Civil Parish	Climping, Arun, West Sussex
Civil Parish	Yapton, Arun, West Sussex
District	Arun, West Sussex

Address

Felpham to Climping Cycle Path (A259), West Sussex

Description and Sources

Description

A watching brief was carried out during the construction of a new cycle path immediately north of the A259. However, due to the relatively shallow ground reduction and the presence of numerous services no archaeological finds or features were recorded. {1}

Description and Sources

Description

Rescue excavations revealed evidence of parts of a Romano-British and medieval ditched field system, medieval smithing slag and traces of a possible building made of flint with a tiled roof. Roman activity falls between mid 1st-4th centuries AD. Medieval pottery suggests late 13th-14th century activity with indication of activity into the early 15th century. Worked and burnt flint and a solitary Middle-Late Bronze Age feature suggests prehistoric activity in the vicinity. A single, poorly preserved Anglo-Saxon grave, carbon dated to cal. AD 680-890, with an east-west orientation, was also found. (1) The GIS mapping indicates the approximate extent of the site.

Description and Sources

Description

A watching brief (24/11/2014-24/11/2014) was carried at Comet Corner, Middleton-on-Sea during the geotechnical pitting in preparation for the proposed realignment of the road junction. The underlying geology comprises Upper Chalk overlain by superficial deposits of undifferentiated River Terrace Deposits of sand, silt and clay. The site lies at approximately 4m aOD.

A single trial pit was monitored. The pit measured 1.4m by 0.70m and was excavated to a depth of 0.56m. No archaeological finds or features were identified and the natural geology was not observed. {1}

A watching brief (08/03/2017-12/05/2017) was carried out at Comet Corner, Middleton-on-Sea, during road improvement works. The site is located at the junction of Worms Lane and Yapton Road. The site is relatively flat and lies at a height of around 4m aOD. The underlying geology consists of Aeolian deposits.

Two areas were observed during the watching brief. Area A - excavation of a new section of roadside drainage ditch on the west side of the B2132, to the south of the A259 and Area B - widening of the eastern splay of the B2132 on the south side of the A259.

A small amount of finds (five pottery sherds, two struck flints and six burnt flints) were recovered from Area A. Subsequent investigation by hand established that these finds came from patches of the subsoil layer which had been disturbed by rooting. No archaeological features were observed in this area. No archaeological features or finds were identified from Area B which had been heavily disturbed in the past by previous roadworks and the excavation of service trenches. {2}

Description and Sources

Description

An archaeological evaluation was undertaken on land adjacent to Flansham Lane, Felpham. In total 19 trenches were excavated during which a number of features were identified, one of these being a ditch which contained pottery dating to the Iron Age period. Undated features were also identified. The site was seen to have moderate to high potential for containing more archaeology. {1}

Cottage. Late C17 or early C18 altered in C20. Flint faced with brick quoins and window dressings (now painted). End brick chimneystack to right with flat slab on top. Thatched roof hipped to left swept over porch to left and forming eyebrow dormer to right. 1 storey and attic, 1 window. Attic window is C20. 3-light casement with diamond mullions. Ground floor has similar window with hoodmoulding. C20 painted brick porch to left with plank door and side lights. 3 triangular buttresses. Right side elevation has 2 small windows each side of the fireplace with wooden surrounds and leaded lights and 1 brick and flint buttress. Left side elevation has 4 similar windows and a deep plinth. Rear elevation has flat roofed extension to ground floor in matching materials and one C20 3-light dormer. Interior not inspected but exposed ceiling beams and framing reported. Thought to have had connections with smuggling, a kettle reputed to have been hoisted on the chimney when the coast was clear, hence the name.
