IMPLEMENTATION GUIDELINES

1.0 GENERAL
All plants shall conform to BS 3090 and be in accordance with the National Plant Specification. Supplying nurseries shall be registered under the HTA Nursery Certification Scheme. All plants shall be packed and transported in accordance with the Code of Practice for Plant Handling as produced by CPSE. Planting shall not be done when the ground is waterlogged, frostbound or during periods of cold drying winds. All bare root stock shall be root dipped in an approved water-retaining polymer. If the formation level is compromised it should be topped through before topsoiling.

2.0 ORNAMENTAL SHRUBS AND TREES
2.1 Ground Preparation
Where necessary treat existing weeds with a glyphosate based herbicide and allow a suitable period as recommended by the manufacturer for this to take effect. A general purpose slow release fertilizer at the rate of 75g/m² and Tree Planting and Mulching Compost at the rate of 20litres/m² are to be incorporated into the top 150mm of topsoil during final cultivations. All extraneous matter such as plastic, wood, metal and stones greater than 30mm in any dimension shall be removed from site. Surface levels should remain regular and even. Tree pits are to be excavated and the base broken up a further 150mm with the sides well scarified to prevent smearing. All trees up to and including selected standards are to be supported with single 75mm diameter stakes. All rootball, container grown and trees over heavy standard size shall be fitted with a below ground anchoring system. Stakes should be driven 500mm into undisturbed ground before planting the tree, taking care to avoid underground services and cables etc. Shrub Planting to have 300mm topsoil and a minimum of 600mm subsoil. Shrub pits to be broken up to full depth of topsoil.

2.2 Planting
Shrubs and hedges are to be set out as shown on the drawing and pit planted into the prepared soil at the specified centres with minimal disturbance to the rootball and well firmed in. Trees are to be placed into the pits and bedded with topsoil incorporating slow release fertilizer and Tree Planting and Mulching Compost. Firm trees in well. Water in all trees and shrubs at the end of each day of planting. Tree pits must be positively drained unless soils are proven to be free draining. Spread ornamental pine bark mulch to a depth of 75mm across all new planting areas ensuring groundcover plants are not buried. Ornamental hedges to be supported by canes where required.

3.0 NATIVE WOODLAND AND SHRUB PLANTING
Planting areas to have 300mm Topsoil and 600mm Subsoil (min). Prior to planting use appropriate measures to suppress weed growth to all shrub areas. Planting pits to be broken up to full depth of topsoil. All stones above 30mm, roots, debris and other deleterious materials to be removed prior to grading. Surface levels should remain regular and even. Standard trees within woodland mix to be planted as per section 2.0 above.

4.0 HEDGEROW PLANTING
Planting areas to have 300mm Topsoil and 450mm Subsoil (min). Plant shrubs in trenches large enough to take full spread of roots. Plant in a double staggered row 350mm apart and with 550mm between rows, to result in 5 plants per linear metre. Finish with 75mm depth of bark mulch for weed suppression.

5.0 MARGINAL AND AQUATIC PLANTING
Planting areas to have topsoil - 300mm site won or imported soils with low nutrient levels and a friable texture. Subsoil - existing made good plus sown medium or heavy subsoil as required to achieve finished levels.

6.0 TIMINGS
Bare rooted and root balled stock to be planted between mid-November and end-February. Seed shall be sown as per manufacturer's recommendations.

7.0 PLANT PROTECTION AND MULCH
Native shrub and hedgerow plants to be protected by spiral guards or shrub shelters as appropriate. Where necessary trees to be protected with guards as appropriate. On plot planting beds to be mulched with 50mm of ornamental bark over weed suppression membrane. Planting beds in key areas of public open space areas to be mulched with 75mm of amenity grass mulch without membrane.

8.0 ROOT BARRIERS
Where proposed trees are located adjacent to roads/pathways root protection barriers to be provided on footpath side of tree pit. (Location and design of barriers to be agreed with project engineer).

9.0 AMENITY GRASS
Areas to be sown with amenity grass mix or turfed to have 150mm Topsoil and a minimum 450mm subsoil.

9.1 Preparation
Topsoil to be broken up to full depth to fully incorporate ameliorants/fertilizer. All stones above 35mm, roots, debris and other deleterious materials to be removed prior to grading. Finished levels after settlement should be 25mm above adjacent paving levels. For final cultivation, reduce seed bed to fine, firm with good crumb structure. Seed to be broadcast at a rate of 35g/m² unless otherwise stated.

9.2 Turf
Front gardens to be turfed. Turfing operations shall be in accordance with BS 4426. Whole turves shall be laid around the perimeter of the area to be turfed. The central area shall be laid in rows with staggered joints, well sutured together, working from planks positioned on curves already laid. The turf shall be watered on completion. Any unevenness shall be made good by lifting the turf and adjusting the levels. Should shrinkage occur, fine topsoil shall be brushed into the joints. Turf must be rolled out immediately to springsummer and within 24 hours of delivery in the autumn/winter.

9.3 Seeding
To be seeded according to manufacturer's instructions.

10.0 MEADOW (GRASSLAND AND WETLAND MEADOW)
Wildflower and wetland meadow areas to have 150mm low nutrient top soil (high nutrient soils within 1 metre of the surface) and a minimum 450mm depth subsoil. Ground should be free of weeds (particularly docks and thistles) and stable. Ground to be worked to a medium fin and seeded according to manufacturer's instructions.

11.0 TOPSOIL
11.1 Existing Topsoil
Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from rocks larger than 50mm diameter, concrete, all roots, wire, brick, and have less than 20% clay. Allow for pre-application of herbicide as above. Fertilize with 100g per meter square of Visar 'Nutricote 18P' slow release fertilizer, in accordance with the manufacturer's instructions. For beds less than 5 meters in width, work over thoroughly or machine cultivate soil to a depth of 300mm, ensuring that the subgrade and topsoil are completely broken up and free draining, relieving any compaction. For beds greater than 5 meters in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm, except where there are services, or within 10 metres of tree stems or 3 metres of existing hedges. Do not go to areas where roots greater than 10mm diameter are encountered.

11.2 Imported Topsoil
Any imported topsoil for making up ground, shall conform to BS 3882:2015, and be free from rocks (over 50mm diameter), concrete, roots, wire and brick, and have less than 20% clay. It is essential that the following information, at least, be provided by the supplier prior to supplying the topsoil:
a) Number and date of British standard BS 3882
b) Soil source:
• For natural topsoil: Description of location including previous and current land use and OS grid reference.
• For manufactured topsoil: name of producer
c) Designation of the topsoil
• The supplier's understanding of the intended use of the soils where the topsoil will be used
d) Details of the laboratory that performed the analysis
e) Date the topsoil was sampled, date the sample was received by the laboratory, date the laboratory reported the results
f) Soil texture class
g) Content of coarse fragments
h) Mass loss on ignition
i) pH of the topsoil
• The carbonate content, total nitrogen, extractable phosphate, potassium and magnesium, carbon: nitrogen ratio
j) Topsoil electrical conductivity
k) Content of potentially phytotoxic elements
• Content of visible contaminants; plastics and/or sharp

12.0 To be maintained according to management plan. All planting to be watered to ensure survival.
