**Cc:** Amber Willard <Amber.Willard@arun.gov.uk>  
**Subject:** Planning Consultation on: P/26/22/HH

Dear Sir/ Madam,

**Erection of single storey rear extension, loft conversion to habitable use and installation of solar panels. (P/168/21/HH)**

**123 West Front Road,  
Pagham,  
PO21 4TB**

Coast Protection have no objection to the application.

Although some of the site is located in Flood Zone 2 and Flood Zone 3 the proposed changes are outside of these areas. As such, a Site Specific Flood Risk Assessment is not required.

On the 6<sup>th</sup> October 2021, The Planning Policy Committee agreed a new interim framework for assessing planning applications at Pagham while the implications of Coastal Change Management Area (CCMA) are explored.

I have tabulated the agreed approach below;

| <u>Category<br/>ref.</u> | <u>Development Type</u>                | <u>Description</u> | <u>Decision</u> |
|--------------------------|----------------------------------------|--------------------|-----------------|
| 1                        | All new development                    | -                  | Not permitted   |
| 2                        | All redevelopment – (new structure[s]) | Where there is     | Not permitted   |

|   |                                          |                                                                                                                 |                                                                                                |
|---|------------------------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
|   |                                          | significantly raised level of risk now or in predictions covering the ensuing 5 years                           |                                                                                                |
| 3 | All redevelopment (new structure[s])     | No raised level of risk now or in predictions covering the ensuing 5 years and AND no occupier density increase | Permitted finished floor levels to be at least 300mm above predicted flood levels in all cases |
| 4 | Reconstruction                           | Using substantial portions of the existing building – e.g. re-roofing or fenestration                           | Permitted with increased property level protection where practicable                           |
| 5 | Non-habitable development                | e.g. garages, porches, non-habitable annexes                                                                    | Permitted where otherwise allowed – conditioned upon continuing non-habitable status           |
| 6 | Other risk reduction related development | -                                                                                                               | permitted where otherwise allowed.                                                             |

When assessing the proposal against the interim framework I believe this application will fall into category 5.

### **Background:**

Pagham beach is a highly designated site in terms of geomorphology, flora and fauna. The beach upon which the estate is constructed is also dynamic and in the past 10 – 15 years we have observed growth, breach and re-distribution of a shingle spit that emanates from the Church Norton side of the harbour channel.

This may seem like a long distance away from the site in question but coastal processes are such that effects (natural or otherwise) can be seen over considerable distanced and over long time scales.

Pagham beach has suffered from erosion over the past 10 years or so in various places – primarily those places have correlated to spit length. The spit breached naturally in 2016 but the impact of the systems development is still evident.

A Coastal Change Management Area has not been declared for this part of the coastline but the issues above highlight Pagham as a dynamic area. Therefore, the appropriateness of any development should be considered with this in mind.

**Other general comments that may be of interest to the Applicant are as follows:**

- There can be no guarantee that homes situated next to the sea are 100% safe. Living close to any expanse of water always carries some level of risk; homeowners should be aware of this and should take appropriate precautionary measures if they consider it necessary.
- The Environment Agency flood maps indicate that the proposal is located in close proximity to Flood Zone 2 & Flood Zone 3. It should be understood that the mapping provided by the Environment Agency is indicative and subject to change as new information / modelling becomes available.
- The Environment Agency have produced National Coastal Erosion Risk Mapping. This dataset provides detail on the predicted erosion rates for the short, medium and long term, along with the shoreline management Plan for each epoch.  
<https://environment.maps.arcgis.com/apps/webappviewer/index.html?id=9cef4a084b-bb4954b970cd35b099d94c>
- The Beachy Head to Selsey Bill Shoreline Management Plan (SMP) provides a high level assessment of the risks associated with coastal evolution and presents a policy framework to address these risks. <http://www.se-coastalgroup.org.uk/wp-content/uploads/2013/10/Beachy-Head-to-Selsey-Bill-SMP-FINAL.pdf>
- The 'Pagham to East Head Coastal Defence Strategy' sits below the SMP and suggests how best to manage coastal flooding and erosion risk over a 100 year strategy period for smaller lengths of coastline. The Strategy has identified shortlisted options on how this can be achieved, provided funding is available. Full documentation can be found at: <https://drive.google.com/file/d/1kLyfHYo-4qrjWWLpiGmYjWP7idZpJFG/view>
- Living and building on the Coast In Arun <https://www.arun.gov.uk/living-and-building-on-the-coast>
- The Government's current strategy for funding capital works (e.g. major groyne replacement schemes) is known as Partnership Funding. If or when any Partnership Funding might be required direct beneficiaries of the defence are likely to be approached. I.e. those likely to be at risk from flooding or erosion within the timescale of the scheme. I have provided a link which explains partnership funding in greater detail - <https://www.gov.uk/government/publications/flood-and-coastal-resilience-partnership-funding>

Should you have any comments to make, these should be sent by replying to this email by 31st March 2022 . You can also monitor the progress of this application through the Council web site:

<https://www.arun.gov.uk/planning-application-search>

The application will be determined having regard to the development plan policies (if any are relevant) and other material considerations. The development plan can be accessed via the website <https://www.arun.gov.uk/development-plan> as can information on what comments we can consider <https://www.arun.gov.uk/planning-application-comments>

**Please be aware that any comments you may make will be available on our website so please do not insert personal details or signatures on your reply.**

Should the application go to appeal the Planning Inspectorate will publish any comments made to the Council on their website: <https://app.planninginspectorate.gov.uk/> but they will protect personal details.

When the appeal relates to a householder application there will be no opportunity to make further comments.

In the absence of a reply within the period stated, I shall assume that you have no observations to make

Yours sincerely

Amber Willard
