Subject: P/38/19/PL photos before site meeting

I have attached photos taken of the Roundstone Lagness site. As you can see the season is over, confirmed by a permanent member of staff. The photos show the site devoid of staff and plants. We understand that plants and staff will be positioned on site ready for your site meeting to disguise the fact that their season is over, so please view these photos carefully.

As you know, today they went ahead and mowed the designated area for wildlife before we had a chance to do a biodiversity check, they knew this test was going to take place. They timed this cut so well pre site visit - It will look like it never existed, but again fortunately we have the before photos.

Kind regards

Abi Hudlass-Galley
